updates and editorial comments of the Soviet Mathematical Encyclopedia published by Soviet Encyclopedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey-type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up-to-date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers, and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques, and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results, and techniques.

Subramaniam, 2015-08-01. Mathematics and Science education have both grown in fertile directions in different geographic regions. Yet the mainstream discourse in international handbooks does not lend voice to developments in cognition, curriculum, teacher development, assessment policy, and implementation of mathematics and science in many countries. Paradoxically, in spite of advances in information technology and the flat earth syndrome, old distinctions and biases between different groups of researchers persist. In addition, limited accessibility to conferences and journals also contribute to this problem. The International Sourcebooks in Mathematics and Science Education focus on under-represented regions of the world and provides a platform for researchers to showcase their research and development in areas within mathematics and science education. The First Sourcebook on Asian Research in Mathematics Education (China, Korea, Singapore, Japan, Malaysia, and India) provides the first synthesized treatment of mathematics education that has both developed and is now prominently emerging in the Asian and South Asian world. The book is organized in sections coordinated by leaders in mathematics education in these countries and editorial teams for each country affiliated with them. The purpose of the unique sourcebook is to both consolidate and survey the established body of research in these countries with findings that have influenced ongoing research agendas and informed practices in Europe, North America, and other countries, in addition to serving as a platform to showcase existing research that has shaped teacher education, curricula, and policy in these Asian countries. The book will serve as a standard reference for mathematics education researchers, policy makers, practitioners, and students both in and outside Asia and complement the Nordic and
