Code/Space Rob Kitchin, Martin Dodge, 2014-01-10 An analysis of the ways that software creates new spatialities in everyday life from supermarket checkout lines to airline flight paths After little more than half a century since its initial development computer code is extensively and intimately woven into the fabric of our everyday lives From the digital alarm clock that wakes us to the air traffic control system that guides our plane in for a landing software is shaping our world it creates new ways of undertaking tasks speeds up and automates existing practices transforms social and economic relations and offers new forms of cultural activity personal empowerment and modes of play In *Code Space* Rob Kitchin and Martin Dodge examine software from a spatial perspective analyzing the dyadic relationship of software and space The production of space they argue is increasingly dependent on code and code is written to produce space Examples of code space include airport check in areas networked offices and caf s that are transformed into workspaces by laptops and wireless access Kitchin and Dodge argue that software through its ability to do work in the world transduces space Then Kitchin and Dodge develop a set of conceptual tools for identifying and understanding the interrelationship of software space and everyday life and illustrate their arguments with rich empirical material And finally they issue a manifesto calling for critical scholarship into the production and workings of code rather than simply the technologies it enables a new kind of social science focused on explaining the social economic and spatial contours of software
