Fletcher, 2018 Laboratory Manual for Automotive Electricity William Roy Varner, Fred Colfax Smith, 1926 *Laboratory Manual for Electronics via Waveform Analysis* Edwin C. Craig, 2012-12-06 To the Instructor The purpose of this laboratory manual is not just to help students to set up electronic circuits that function as they should The important thing is the electronic concepts that the student learns in the process of setting up and studying these circuits Quite often a student learns more electronics when he has to trouble shoot a circuit than when the circuit performs as it should when first built It is unlikely that any students would be able to complete all of these experiments in one semester The author believes that all

students should have laboratory experiences with power supplies amplifiers oscillators and integrated circuits. Additional laboratory experiments should be determined by the instructor. Therefore you can choose those that you want done. Some students are more efficient in the laboratory than others. Therefore some would be able to complete more experiments in a semester than others. Also many of these experiments cannot be completed in one two hour laboratory period. If space is available the circuits could be left intact from one period to the next. Or you might want to select steps in an experiment that you want to delete. Neither the values of the components or the magnitudes of the power supplies as given in the instructions are critical. Therefore you could in most cases change them if the ones recommended are not available. **Engineering**
