Ulrich Häußler-Combe,2014-11-24 The book covers the application of numerical methods to reinforced concrete structures To analyze reinforced concrete structures linear elastic theories are inadequate because of cracking bond and the nonlinear and time dependent behavior of both concrete and reinforcement These effects have to be considered for a realistic assessment of the behavior of reinforced concrete structures with respect to ultimate limit states and serviceability limit states The book gives a compact review of finite element and other numerical methods The key to these methods is through a proper description of material behavior Thus the book summarizes the essential material properties of concrete and reinforcement and their interaction through bond These basics are applied to different structural types such as bars beams strut and tie models plates slabs and shells This includes prestressing of structures cracking nonlinear stressstrain relations creeping shrinkage and temperature changes Appropriate methods are developed for each structural type Large displacement and dynamic problems are treated as well as short term quasi static problems and long term transient problems like creep and shrinkage Most problems are illustrated by examples which are solved by the program package ConFem based on the freely available Python programming language The ConFem source code together with the problem data is available under open source rules at concrete.fem.com The author aims to demonstrate the potential and the limitations of numerical methods for simulation of reinforced concrete structures addressing students teachers researchers and designing and checking engineers **Mitchell's Structure & Fabric Part 2** J S Foster,2013-11-19 Structure and Fabric Part 2 consolidates and develops the construction principles introduced in Part 1 With generous use of illustrations this book provides a thorough treatment of the techniques used in the construction of various types of building This new edition has been thoroughly reviewed and updated with reference to recent changes in building regulations national and European standards and related research papers The comprehensive presentation provides guidance on established and current practice including the administrative procedures necessary for the construction of buildings "[Code of Massachusetts regulations, 2009](#)" ,2009 Archival snapshot of entire looseleaf Code of Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020 [NEHRP Commentary on the Guidelines for the Seismic Rehabilitation of Buildings](#) Eugene Zeller,2000-06 This document from the National Earthquake Hazards Reduction Program NEHRP was prepared for the Building Seismic Safety Council BSSC with funding from the Federal Emergency Management Agency FEMA It provides commentary on the NEHRP Guidelines for the Seismic Rehabilitation of Buildings It contains
