*Hypothesis Testing Made Simple* Leonard Gaston Ph.D., 2014-03-11 This tutorial directed primarily toward students doing research projects is intended to help them do four things 1 Decide if their data gathering activity can yield numerical data that will permit a meaningful hypothesis test 2 If it will decide if one of the tests described would be useful 3 If so apply that test and 4 Adequately explain the use of the test so their readers can have confidence in their analysis It is not intended to be a text for a complete statistics course only a guide to few relatively simple tests Complex hypothesis testing procedures are not covered For example the discussion of Analysis of Variance ANOVA introduces what is called one way ANOVA Two way ANOVA a more complex procedure involving the use of blocking variables is not covered It simply presents a few commonly used tests and down to earth explanations of how to use them It is intended to be a low cost supplement that can help its reader understand a few commonly used tests It was put together on a shoestring by a non mathematician for the benefit of other non mathematicians or for mathematicians who have forgotten some or all of the statistics they have studied There are no color illustrations or professionally prepared charts and graphs Economy was a guiding principle Four brief introductory chapters discuss numbers basic terms measures of central tendency and dispersion probability and data presentation With that background the book then introduces various tests and explains them in down to earth language

*Integrated Management of Technical Documentation* Jirka Hoppe,2012-12-06 Writing documentation is an integral part of any technical product development A significant amount of time is spent describing the product functionality giving insights into technical details providing maintenance instructions specifying marketing information writing user manuals etc As the creation of such documentation is generally a source of higher production costs many large companies are realising the need to increase the efficiency of documentation handling Simple documents consisting of only a few pages can be developed on simple systems Basic components of such systems are an editor handling text and graphics file storage and a printer Such configurations however are not sufficient to handle professional documentation as produced by larger companies Detailed studies of technical documentation requirements have revealed that in particular the following functionality is not usually provided by such simple documentation systems Technical documentation is often very large documents having hundreds or even thousands of pages are not exceptional Due to size and complexity technical

documentation is developed most often by a team of authors A system for technical documentation has to provide functionality supporting the organisation of a group of authors Technical documentation usually consists of many different documents combined into one large documentation for a particular product The optimum organisation of the storage and retrieval of documents is crucial for the performance and acceptability of the system The functionality offered by normal file systems is not adequate to organise complex systems
