The Knowledge Gap Natalie Wexler,2019-08-06 Essential reading for teachers education administrators and policymakers alike

STARRED Library Journal The untold story of the root cause of America's education crisis It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education The problem wasn't one of the usual scapegoats lazy teachers shoddy facilities lack of accountability It was something no one was talking about the elementary school curriculum's intense focus on decontextualized reading comprehension skills at the expense of actual knowledge In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars* Wexler brings together history research and compelling characters to pull back the curtain on this fundamental flaw in our education system one that fellow reformers journalists and policymakers have long overlooked and of which the general public including many parents remains unaware But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong it also follows innovative educators who are in the process of shedding their deeply ingrained habits and describes the rewards that have come along students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed If we truly want to fix our education system and unlock the potential of our neediest children we have no choice but to pay attention *The Education Invasion* Joy Pullmann, 2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation's schools Who benefits And how can citizens regain local self governance in education so their children's minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats *The Education Invasion* offers answers and remedies *Solving Modern Crime in Financial Markets* Marius-Cristian Frunza, 2015-12-09 This comprehensive source of information about financial fraud delivers a mature approach to fraud detection and prevention It brings together all important aspects of analytics used in investigating modern crime in financial markets and uses R for its statistical examples It focuses on crime in financial markets as opposed to the financial industry and it highlights technical aspects of crime detection and prevention as opposed

 human level intelligence and its impact on the future for us all **Clickers in the Classroom** David S. Goldstein, Peter D.
 Wallis, 2023-07-03 With classroom response systems or CRSs also known as Student Response Systems Individual Response
 Systems or informally clickers in use in higher education for some 20 years there is now both ample research and a wealth of
 examples and ideas to draw on for faculty who are contemplating their use or exploring new ways to integrate them in their
 teaching The research demonstrates that integrated purposefully in courses the use of clickers aligns with what neuroscience
 tells us about the formation of memory and the development of learning In addition they elicit contributions from otherwise
 reticent students and enhance collaboration even in large lecture courses foster more honest responses to discussion
 prompts increase students engagement and satisfaction with the classroom environment and provide an instantaneous
 method of formative assessment This book presents a brief history of the development of CRSs and a survey of empirical
 research to provide a context for current best practices and then presents seven chapters providing authentic effective
 examples of the use of clickers across a wide range of academic disciplines demonstrating how they can be effective in
 helping students to recognize their misconceptions and grasp fundamental concepts Like all pedagogical interventions
 classroom response systems are no panacea and the experienced contributors candidly describe avoidable pitfalls while
 demonstrating how clickers can deepen student learning and how by providing instantaneous feedback they enable teachers
 to make adjustments on the fly to better address student understandings or misunderstandings The final chapter explores
 pros and cons of response systems that use mobile devices and smart phones and the book concludes with an annotated list
 of further resources such as books articles and videos Contemporary Research and Perspectives on Early Childhood
Mathematics Education Iliada Elia, Joanne Mulligan, Ann Anderson, Anna Baccaglini-Frank, Christiane Benz, 2018-02-21 This
 book brings together a collection of research based papers on current issues in early childhood mathematics education that
 were presented in the Topic Study Group 1 TSG 1 at the 13th International Congress on Mathematical Education ICME 13
 held at the University of Hamburg in 2016 It will help readers understand a range of key issues that early childhood
 mathematics educators encounter today Research on early childhood mathematics education has grown in recent years due
 in part to the well documented positive relation between children's early mathematical knowledge and their later
 mathematics learning and to the considerable emphasis many countries are now placing on preschool education The book
 addresses a number of central questions including What is mathematical structural development and how can we promote it
 in early childhood How can multimodality and embodiment contribute to early mathematics learning and to acquiring a

better understanding of young children's mathematical development How can children's informal mathematics related experiences affect instruction and children's learning in different mathematics content areas What is the role of tools including technology and picture books in supporting early mathematics learning What are the challenges in early childhood mathematics education for teachers education and professional development

Modeling Individual Differences in Perceptual Decision Making Joseph W. Houpt, Cheng-Ta Yang, James T. Townsend, 2017-01-18 To deal with the abundant amount of information in the environment in order to achieve our goals human beings adopt a strategy to accumulate some information and filter out other information to ultimately make decisions Since the development of cognitive science in the 1960s researchers have been interested in understanding how human beings process and accumulate information for decision making Researchers have conducted extensive behavioral studies and applied a wide range of modeling tools to study human behavior in simple detection tasks and two choice decision tasks e.g. discrimination classification In general researchers often assume that the manner in which information is processed for decision making is invariant across individuals given a particular experimental context Independent variables including speed accuracy instructions stimulus properties i.e. intensity and characteristics of the participants i.e. aging cognitive ability are assumed to affect the parameters in a model i.e. speed of information accumulation response bias but not the way that participants process information e.g. the order of information processing Given these assumptions much modeling has been accomplished based on the grouped data rather than the individual data However a growing number of studies have demonstrated that there were individual differences in the perceptual decision process In the same task context different groups of the participants may process information in different manners The capacity and architecture of the decision mechanism were found to vary across individuals implying that humans decision strategies can vary depending on the context to maximize their performance In this special issue we focused on a particular subset of cognitive models particularly accumulator models multinomial processing trees and systems factorial technology SFT as applied to perceptual decision making The motivation for the focus on perceptual decision making is threefold Empirical studies of perception have grown

out of a history of making a large number of observations for each individual so as to achieve precise estimates of each individual's performance. This type of data rather than a small number of observations per individual is most amenable to achieving precision in individual level and group level cognitive modeling. Second, the interaction between the acquisition of perceptual information and the decisions based on that information to the extent that those processes are distinguishable offers rich data for scientific exploration. Finally, there is an increasing interest in the practical application of individual variation in perceptual ability whether to inform perceptual training and expertise or to guide personnel decisions. Although these practical applications are beyond the scope of this issue, we hope that the research presented herein may serve as the foundation for future endeavors in that domain.
