

1. Take the sides of each triangle one by one and ask: Can all the triangles be rotated into each other? If not, why, then? Explain your finding using precise mathematical language and be ready to defend that you are right based on the Mathematical Practices.

Yes, all the triangles can be rotated into each other. The angle associated with $\angle 1$ is 45° (since the legs are congruent), the side with the right-angle vertex the shorter leg is obtained.

Explain your why. These triangles might seem not to be the 45-45-90 triangles, but the corresponding segments meeting into each other, so that the legs obtained into each other are different than the legs obtained into each other, showing that the corresponding sides are different depending on the given transformation.

2. Now, ask: If you rotate triangle 1 into triangle 2, is the reflection $(x, y) \rightarrow (-x, y)$ the transformation? Is length 10 preserved? Is slope preserved? Is the length of the legs preserved? Is the length of the hypotenuse preserved?

Students may choose to draw the line connecting $(-4, 2)$ to $(4, 2)$ or $(-2, 4)$ to $(2, 4)$, and the distance between the points is 8. Another explanation should include some discussion about the fact that the 45-45-90 triangles are rotated into each other, so the length of the hypotenuse is preserved. The length of the legs is preserved, but the length of the hypotenuse is not.

3. Now ask: If you rotate triangle 1 into triangle 3, is the length 10 preserved? Is slope preserved? Is the length of the legs preserved? Is the length of the hypotenuse preserved?

Yes, the length of the hypotenuse is preserved, but the length of the legs is not. The length of the legs is not preserved, but the length of the hypotenuse is preserved.

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.

4. Now ask: If you rotate triangle 1 into triangle 4, is the length 10 preserved? Is slope preserved? Is the length of the legs preserved? Is the length of the hypotenuse preserved?

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.

Another possible answer:

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.

Explain your why. The length of the hypotenuse is preserved, but the length of the legs is not.
