

Use the above class as a superclass to implement the following 3 subclasses:

| <u>Class</u>  | <u>Instance Fields</u> |
|---------------|------------------------|
| IDCard        | ID number              |
| CallingCard   | Card number, PIN       |
| DriverLicense | Expiration year        |

- Write declarations for each of the subclasses. For each subclass, supply private instance variables. Leave the bodies of the constructors and the format methods blank for now.
- Code constructors for each of the three subclasses. Each constructor should call the superclass constructor to set the name. Here is one example:

```
public IDCard(String n, String id)
{
    super(n);
    idNumber = id;
}
```

- Replace the code of the format method for the three subclasses. The methods should produce a formatted description of the card details. The subclass methods should call the superclass format method to get the formatted name of the cardholder then add the additional formatted instance fields. Here is an example for IDCard:
