 Carlyle-Moses,Shin'ichi Iida,Beate Michalzik,Kazuki Nanko,Alexander Tischer,2020-02-05 The United Nations has declared  
 2018 2028 as the International Decade for Action on Water for Sustainable Development This is a timely designation In an  
 increasingly thirsty world the subject of forest water interactions is of critical importance to the achievement of sustainability  
 goals The central underlying tenet of this book is that the hydrologic community can conduct better science and make a more  
 meaningful impact to the world's water crisis if scientists are 1 better equipped to utilize new methods and harness big data  
 from either or both high frequency sensors and long term research watersheds and 2 aware of new developments in our  
 process based understanding of the hydrological cycle in both natural and urban settings Accordingly this forward looking  
 book delves into forest water interactions from multiple methodological statistical and process based perspectives with some  
 chapters featuring data sets and open source R code concluding with a chapter on future forest hydrology under global  
 change Thus this book describes the opportunities of convergence in high frequency sensing big data and open source  
 software to catalyze more comprehensive understanding of forest water interactions The book will be of interest to  
 researchers graduate students and advanced undergraduates in an array of disciplines including hydrology forestry ecology

*Functional Imaging in Oncology* Antonio Luna, Joan C. Vilanova, L. Celso Hygino da Cruz Jr., Santiago E. Rossi, 2013-12-11 In the new era of functional and molecular imaging both currently available imaging biomarkers and biomarkers under development are expected to lead to major changes in the management of oncological patients This well illustrated two volume book is a practical manual on the various imaging techniques capable of delivering functional information on cancer including preclinical and clinical imaging techniques based on US CT MRI PET and hybrid modalities This first volume explains the biophysical basis for these functional imaging techniques and describes the techniques themselves Detailed information is provided on the imaging of cancer hallmarks including angiogenesis tumor metabolism and hypoxia The techniques and their roles are then discussed individually covering the full range of modalities in clinical use as well as new molecular and functional techniques The value of a multiparametric approach is also carefully considered

**Building the gateway to consciousness - about the development of the thalamus** Tomomi Shimogori, Steffen Scholpp, 2015-06-19 Since years patterning and function of some brain parts such as the cortex in the forebrain and the optical tectum or cerebellum in the midbrain hindbrain region are under strong investigation Interestingly the diencephalon located in the caudal forebrain has been ignored for decades Consequently the existing knowledge from the development of this region to function in the mature brain is very fragmented The central part of the diencephalon is the thalamus This central relay station plays a crucial role in distributing incoming sensory information to appropriate regions of the cortex The thalamus develops in the posterior part of the embryonic forebrain where early cell fate decisions are controlled by local signaling centers In this Research Topic we discuss recent achievements elucidating thalamic neurogenesis from neural progenitor cells to highly specialized neurons with cortical target cells in great distance In parallel we highlight developmental aspects leading from the early thalamic anlage to the late the organization of the complex relay station of the brain
