**The general physiology ; Blood ; Nerve muscle physiology ; Digestive system ; Cardio-vascular system (CVS) ; Respiratory system ; Excretory system** A. K. Jain,2005      *Textbook Of Medical Physiology* Khurana,2005

The book presents an exhaustive and thorough exposition of the fundamentals of medical physiology The exposition is divided systematically into three sections covering General Physiology Systemic Physiology and Specialized Integrative Physiology Each section begins with a brief Introduction highlighting the topics covered The subject is then explained in a graded manner with a large number of tables flowcharts and diagrams to aid understanding The level of exposition in the book is sufficiently detailed for it to serve as a useful text for undergraduate courses as well as for PG entrance examinations About the Author Indu Khurana Associate Professor Department of Physiology Postgraduate Institute of Medical Sciences Rohtak Haryana India

**Introduction To Animal Physiology** Satish Kumar Jindal,2011-09-02 This text book on Physiology of Animals is intended to be useful for elementary animal physiology course in colleges of agriculture zoology veterinary and animal sciences In all s the aim has been to present a clear and concise account of the functioning of various systems of domestic animals Where appropriate examples from human and non domestic animals such as rat and rabbit have been cited Physiology has now grown into a vast discipline The book covers and explains the following deeply o Nature and Scope of Physiology o Body Fluids Water Electrolyte and Acid Base Balance o Respiration o Blood o Circulatory System o Structure Functions of the Kidney o Rumen Function o Digestion Metabolism o Vitamins and Minerals o Endocrine Glands and Their Secretions o Reproduction in the Male o Female Reproduction o Lactation o Nervous System o Bone Skin and Special Senses o Physiology of Temperature Regulation

**Plant and Human Health, Volume 1** Munir Ozturk,Khalid Rehman Hakeem,2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1 4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from natural products is not without its problems Frequent challenges encountered include the procurement of raw materials the selection and implementation of

appropriate high throughput bioassays and the scaling up of preparative procedures Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor Volume 1 highlights how humans from specific areas or cultures use indigenous plants Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically it focuess on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture

**Physicon - The Reliable Icon In Physiology** Sanoop KS,Mridul GS,Nishanth PS,2012-08-31 *An Introductory Guide Book for Paramedical Studies* Prof. (Dr.) Subhasish Chatterjee and Dr. Priyatosh Nath,2024-03-30 The purpose of this thorough handbook is to offer aspiring healthcare professionals a strong fundamental understanding of the paramedical sciences discipline This book serves as a great resource for individuals contemplating a career in paramedical fields such as medical lab technicians or emergency medical technicians It provides guidance and support in navigating the educational pathway associated with these professions The paramedical profession encompasses a broad and ever evolving domain that centers on the provision of prompt medical care during critical circumstances the execution of medical examinations and the provision of support to medical practitioners and surgeons Paramedics serve as the primary responders in emergency situations undertaking the critical tasks of promptly addressing crises providing necessary stabilization measures and facilitating the secure transportation of patients to appropriate medical establishments This profession which is both demanding and fulfilling necessitates a comprehensive understanding of several knowledge domains and a diverse set of abilities The purpose of this guide is to provide the essential principles required to achieve excellence in this sector In this book an exploration will be undertaken to examine the fundamental principles of paramedical studies encompassing a diverse array of subjects such as anatomy and physiology medical procedures microbiology pathology pharmacology and various other areas of study The primary aim of this tutorial is not solely to furnish theoretical knowledge It is vital to acknowledge that although this guide functions as a dependable initial reference it should not be regarded as a replacement for official schooling or professional training The discipline of paramedical is characterized by its continuous evolution necessitating the pursuit of continued professional development in order to remain abreast of the most recent breakthroughs and optimal methodol

**Dynamics of Human Reproduction** James W. Wood,2017-09-29 Awarded the W W Howells Award for the Outstanding Book in Biological Anthropology this

volume presents a comprehensive integrated and up to date overview of the major physiological and behavioral factors affecting human reproduction In attempting to identify the most important causes of variation in fertility within and among human populations Wood summarizes data from a wide range of societies Trained as an anthropologist as well as a demographer he devotes special attention to so called natural fertility populations in which modern contraceptives and induced abortion are not used to limit reproductive output Such an emphasis enables him to study the interaction of biology and behavior with particular clarity The volume weaves together the physiological demographic and biometric approaches to human fertility in a way that will encourage future interdisciplinary research Instead of offering a general overview the focus is to answer one question Why does fertility and the number of live births vary from couple to couple within any particular population and from population to population across the human species as a whole Topics covered include ovarian function conception and pregnancy intrauterine mortality reproductive maturation and senescence coital frequency and the waiting time to conception marriage patterns and the initiation of reproduction the fertility reducing effects of breastfeeding the impact of maternal nutrition on reproduction and reproductive seasonality This unique combination of comprehensive subject matter and an integrated analytical approach makes the book ideally suited both as a graduate level textbook and as a reference work

**Human Identity and Identification** Rebecca Gowland,Timothy James Upton Thompson,2013-01-17

This book offers an overview of human identity and identification examining the whole body by integrating biological and social sciences and theories

**Biometric Authentication** Massimo Tistarelli,Josef Bigun,Anil K. Jain,2003-08-06 Biometric authentication refers to identifying an individual based on his or her distinguishing physiological and or behavioral characteristics It associates an individual with a previously determined identity based on that individual s appearance or behavior Because many physiological or behavioral characteristics biometric indicators are distinctive to each person biometric identifiers are inherently more reliable and more capable than knowledge based e g password and token based e g a key techniques in differentiating between an authorized person and a fraudulent impostor For this reason more and more organizations are looking to automated identity authentication systems to improve customer satisfaction security and operating efficiency as well as to save critical resources Biometric authentication is a challenging pattern recognition problem it involves more than just template matching The intrinsic nature of biometric data must be carefully studied analyzed and its properties taken into account in developing suitable representation and matching algorithms The intrinsic variability of data with time and environmental conditions the social acceptability and invasiveness of acquisition devices and the facility with which the data can be counterfeited must be considered in the choice of a biometric indicator for a given application In order to deploy a biometric authentication system one must consider its reliability accuracy applicability and efficiency Eventually it may be necessary to combine several biometric indicators multimodal biometrics to cope with the drawbacks of the individual biometric indicators
