Observing Human Traits Lab

Background: Physical traits are observable characteristics that are determined by genes. Genes are specific segments of DNA located on chromosomes that code for a particular trait. Most genes have two or more variations called alleles. Some alleles are dominant over other alleles and dominant alleles will be expressed (an organism's phenotype or physical appearance) over recessive alleles. Recessive alleles may be present in an organism but expression is masked in the presence of a dominant allele for the same gene. Recessive traits are only expressed when there are two recessive alleles present in the genotype (DNA code).

Keep in mind that it's not always quite this simple. There are other factors that influence trait expression, and most traits have several genes that influence them. This is an introduction to dominant and recessive traits. Let's get started!

Directions: Circle the phenotype you have for each of the following traits.

An Ape Ethic and the Question of Personhood Gregory F. Tague, 2020-03-05 Gregory F Tague's *An Ape Ethic and the Question of Personhood* argues that great apes are moral individuals because they engage in a land ethic as ecosystem engineers to generate ecologically sustainable biomes for themselves and other species. Tague shows that we need to recognize apes as eco engineers in order to save them and their habitats and that in so doing we will ultimately save earth's biosphere. The book draws on extensive empirical research from the ecology and behavior of great apes and synthesizes past and current understanding of the similarities in cognition, social behavior and culture found in apes. Importantly, this book proposes that differences between humans and apes provide the foundation for the call to recognize forest personhood in the great apes. While all ape species are alike in terms of cognition, intelligence and behaviors, there is a vital contrast: unlike humans, great apes are efficient ecological engineers. Therefore, simian forest sovereignty is critical to conservation efforts in controlling global warming and apes should be granted dominion over their tropical forests. Weaving together philosophy, biology, socioecology and elements from eco psychology, this book provides a glimmer of hope for future acknowledgment of the inherent ethic that ape species embody in their eco centered existence on this planet.

ARTIFICIAL INTELLIGENCE: A MODERN APPROACH IN DIFFERENT FIELDS Prof. Rashmi Pant, Dr. Vibha Pandey & Dr. Pradeep Pandey, 2024-12-16 While highlighting the advantages of Artificial Intelligence (AI) in enhancing human memory, creativity and decision making in daily life, the review paper also notes the difficulties and vulnerabilities involved in implementing AI. The encoding, storing and retrieval of our experiences are powered by human memory. AI has the ability to both facilitate and impede memory encoding and retrieval as well as aid in our knowledge of the problems facing memory research. An artist's own creative abilities may be compromised if they depend too much on AI generated features. When AI systems offer ready-to-eat concepts, people could become unduly dependent on them rather than making their own independent creative thought processes.

Prinz, 2015-11-09 A loud counterblast to the fashionable faith of our times that human nature is driven by biology urgent and persuasive Sunday Times London In this era of genome projects and brain scans it is all too easy to overestimate the role of biology in human psychology But in this passionate corrective to the idea that DNA is destiny Jesse Prinz focuses on the most extraordinary aspect of human nature that nurture

can supplement and supplant nature allowing our minds to be profoundly influenced by experience and culture Drawing on cutting edge research in neuroscience psychology and anthropology Prinz shatters the myth of human uniformity and reveals how our differing cultures and life experiences make each of us unique Along the way he shows that we can't blame mental illness or addiction on our genes and that societal factors shape gender differences in cognitive ability and sexual behavior A much needed contribution to the nature nurture debate Beyond Human Nature shows us that it is only through the lens of nurture that the spectrum of human diversity becomes fully and brilliantly visible **Unique** David Linden, 2020-09-29

Inspired by the abundance of unique personalities available on dating websites a renowned neuroscientist examines the science of what makes you you David J Linden has devoted his career to understanding the biology common to all humans But a few years ago he found himself on OkCupid Looking through that vast catalog of human diversity he got to wondering What makes us all so different Unique is the riveting answer Exploring everything from the roots of sexuality gender and intelligence to whether we like bitter beer Linden shows how our individuality results not from a competition of nature versus nurture but rather from a m lange of genes continually responding to our experiences in the world beginning in the womb And he shows why individuality matters as it is our differences that enable us to live together in groups Told with Linden's unusual combination of authority and openness seriousness of purpose and wit Unique is the story of how the factors that make us all human can change and interact to make each of us a singular person
