Torrescano- Valle, Gerald A. Islebe, Priyadarsi D. Roy, 2019-12-02 This book provides essential information on Mexico's Holocene and Anthropocene climate and vegetation history. Considering the geography of Mexico which is home to a variety of climatic and environmental conditions from desert and tropical to high mountain climates, this book focuses on its postglacial paleoecology and paleoclimatology. Further, it analyses human intervention since the middle Holocene as a major agent of environmental change. Offering a valuable tool for understanding past climate change and its relationship with present climate change, the book is a must read for botanists, ecologists, palaeontologists, and graduate students in related fields.

High Performance Computer Applications Isidoro Gitler, Jaime Klapp, 2016-04-07 This book constitutes the refereed proceedings of the 6th International Conference on Supercomputing ISUM 2015 held in Mexico, Mexico, in March 2015. The 38 revised full papers presented were carefully reviewed and selected from 102 submissions. The papers are organized in topical sections on perspectives in supercomputer infrastructure and applications, parallel algorithms and optimization, HPC applications and simulations.

Water and Energy Gustaf Olsson, 2015-06-14 Rapid and important developments in the area of energy-water nexus over the last two to three years have been significant. This new edition of *Water and Energy: Threats and Opportunities* is timely and continues to highlight the inextricable link between water and energy, providing an up-to-date overview of the subject with helpful detailed summaries of the technical literature. *Water and Energy* has been updated throughout and major changes are new chapters on global warming and fossil fuels, including shale gas and fracking; the consequences of the Deepwater Horizon accident in the Mexican Gulf and the Niger Delta oil spills; new developments in hydropower and continued competition between food, water, and energy. *Water and Energy: Threats and Opportunities 2e* creates an awareness of the important couplings between water and energy. It shows how energy is used in all the various water cycle operations and demonstrates how water is used and misused in all kinds of energy production and generation. Population increase, climate change, and an increasing competition between food and fuel production create enormous pressures on both water and energy availability. Since there is no replacement for water, water security looks more crucial than energy security. This is true not only in developing countries but also in the most advanced countries. For example, the western parts of the USA suffer from water scarcity that provides a real security threat. Part One of the book describes the water-energy nexus, the conflicts and competitions, and the couplings between water security, energy security, and food security. Part Two captures how climate change, population increase, and the growing food demand will have major impact on water availability in many countries in the world. Part Three describes water for energy and how energy production and conversion depend on water availability. As a consequence, all planning has to take both water and energy into consideration. The environmental, including water, consequences of oil and coal exploration and refining are huge in North America as well as in the rest of the world. Furthermore, oil leak accidents have hit America, Africa, Europe, as well as Asia. The consequences of hydropower are discussed, and the competition between hydropower generation, flood control, and water storage is illustrated.

The importance of water for cooling thermal power plants is described as this was so tragically demonstrated at the Fukushima nuclear plants in 2011. Climate change will further emphasize the strong coupling between water availability and the operation of power plants. Part Four analyses energy for water: how water production and treatment depend on energy. The book shows that a lot can be done to improve equipment, develop processes and apply advanced monitoring and control to save energy for water operations. Significant amounts of energy can be saved by better pumping, the reduction of leakages, controlled aeration in biological wastewater treatment, more efficient biogas production and by improved desalination processes. There are 3 PowerPoint presentations available for Water and Energy threats and opportunities.

2e About the author: Gustaf Olsson, Professor Emeritus in Industrial Automation, Lund University, Sweden. Since 2006, Gustaf has been Professor Emeritus at Lund University, Sweden. Gustaf has devoted his research to control and automation in water systems, electrical power systems and process industries. From 2006 to 2008, he was part-time professor in electrical power systems at Chalmers University of Technology, Sweden. He is guest professor at the Technical University of Malaysia (UTM) and at the Tsinghua University in Beijing, China, and he is an honorary faculty member of the Exeter University in the UK. Between 2005 and 2010, he was the editor in chief of the journals *Water Science and Technology* and *Water Science and Technology: Water Supply* (IWA Publishing). From 2007 to 2010, he was a member of the IWA Board of Directors, and in 2010, he received the IWA Publication Award. In 2012, he was the awardee of an Honorary Doctor degree at UTM and an Honorary Membership of IWA. Gustaf has guided 23 PhDs and a few hundred MSc students through their exams and has received the Lund University pedagogical award for distinguished achievements in the education. The Lund University engineering students elected him as the teacher of the year. He has spent extended periods as a guest professor and visiting researcher at universities and companies in the USA, Australia, and Japan, and has been invited as a guest lecturer in 19 countries outside Sweden. He has authored nine books published in English, Russian, German, and Chinese, and contributed with chapters in another 19 books, as well as more than 170 scientific publications.

**Powerless** Diana Hernández,Jennifer Laird,2025-04-08 Energy serves as the lifeblood of our daily experiences It permeates virtually every aspect of our existence facilitating nourishment safety and productivity When affordability threatens energy s availability a family s living situation can become untenable too cold too hot too dark and too often unhealthy and unsafe In *Powerless* sociologists Diana Hernández and Jennifer Laird reveal the hidden hardship of energy insecurity the inability to adequately meet household energy needs Approximately one in ten households in the U S are energy insecure and four in ten are at risk for energy insecurity These statistics alone do not convey the acute pain of utility shutoffs or the relentless toll of chronic energy hardships marked by difficult choices and harsh living conditions Drawing on survey data and interviews with one hundred energy insecure individuals and families Hernández and Laird detail the experience of energy insecurity Individuals and families suffering from energy insecurity endure economic hardships such as difficulty paying utility bills utility debt and disconnection from utility services They also struggle with physical challenges such as poor housing conditions and poor or dysfunctional heating and cooling systems They are often forced to make difficult choices about what bills to pay These decisions are sometimes referred to as heat or eat choices as families cannot afford to pay for heating and food at the same time Energy insecure individuals and families employ a variety of strategies to keep energy costs down to avoid having to make these hard choices This includes deliberate underconsumption of energy enduring physical discomfort and using dangerous alternatives such as open flames ovens or space heaters to try to maintain a comfortable temperature in their home To be energy insecure is to suffer Despite the heavy toll of energy insecurity most people confront these difficulties behind closed doors believing it is a private matter Thus the enormous social crisis of energy insecurity goes unnoticed Hernández and Laird argue that household energy is a basic human right and detail policies and practices that

would expand access to consistent safe clean and affordable energy Their proposals include improving the current energy safety net which is limited and often does not serve the most energy insecure due to stringent program requirements and administrative burdens They also suggest redesigning rates to accommodate income promoting enrollment and expansion of discount programs reforming utility disconnection policies improving energy literacy and ensuring an equitable shift to renewable energy resources Powerless creates a comprehensive picture of the complex social and environmental issue of energy insecurity and shows how energy equity is not just an aspiration but an achievable reality
