

Genetic Maps

- Genes are shown in relative order and distance from each other based on pedigree studies.
- The chance of the chromosome breaking between A & C is higher than the chance of the chromosome breaking between A & B during meiosis.
- Similarly, the chance of the chromosome breaking between E & F is higher than the chance of the chromosome breaking between F & G.
- The closer two genes are, the more likely they are to be inherited together (co-occurrence).
- If pedigree studies show a high incidence of co-occurrence, those genes will be located close together on a genetic map.
