individual who experienced the events described and they generally put a more personal spin on the disorders described. Each chapter has clearly written lab activities including step by step instructions, diagrams and photos and background content needed to allow students to fully understand the concepts explored in lab. Activities encourage hands on exploration and active learning. Each chapter includes integrated tear out pre lab activities to prepare students for lab as well as review pages to be completed following the lab. Many of these assignments require application of content to various clinical situations and are designed to stimulate critical thinking skills and creative problem solving. The design of this lab manual incorporates the authors' beliefs that the use of many senses when learning—seeing, hearing, touching, etc.—engages more areas of the brain, increasing brain activity and enhancing learning. Thus, all lab activities involve using a variety of senses to enhance learning for all types of learners. 442 pages
