3. Chemotherapy:

a. Action of Chemotherapy:

- The goal of chemotherapy is to eliminate or reduce the number of cancer cells by destroying the cells as they are developing.
- 1) Chemotherapy drugs that attack a specific phase of cell development are called cell - specific chemo drugs.
 - 2) Chemotherapy drugs that work at all or any phase of cell development are called cell cycle non-specific.
 - 3) These drugs work best while the tumor cells are actively growing.
 - Most active growth is when the tumor first begins to develop.
 - Early detection for cancer is best.

b. Precautions for Chemotherapy:

1) Precautions for Administration of Chemotherapy:

- Chemotherapy drugs can be administered by multiple routes: oral, topical, IM, IV and intracavity (directly into a body cavity).
- Always be careful when handling antineoplastic drugs because of the dangers of exposure. These drugs can be carcinogenic, mutagenic and teratogenic.
- Look up drug information before administering chemo to make sure you are handling it correctly.
- Exposure can occur by drug contact with the skin or mucous membranes, inhalation, ingestion or accidental injection.
