Schur-Convex Functions and Inequalities Huan-nan Shi, 2019-07-08 This two volume work introduces the theory and applications of Schur convex functions The second volume mainly focuses on the application of Schur convex functions in sequences inequalities integral inequalities mean value inequalities for two variables mean value inequalities for multi variables and in geometric inequalities

Operator and Norm Inequalities and Related Topics Richard M. Aron, Mohammad Sal Moslehian, Ilya M. Spitkovsky, Hugo J. Woerdeman, 2022-08-10 Inequalities play a central role in mathematics with various applications in other disciplines The main goal of this contributed volume is to present several important matrix operator and norm inequalities in a systematic and self contained fashion Some powerful methods are used to provide significant mathematical inequalities in functional analysis operator theory and numerous fields in recent decades Some chapters are devoted to giving a series of new characterizations of operator monotone functions and some others explore inequalities connected to log majorization relative operator entropy and the Ando Hiai inequality Several chapters are focused on Birkhoff James orthogonality and approximate orthogonality in Banach spaces and operator algebras such as C^* algebras from historical perspectives to current development A comprehensive account of the boundedness compactness and restrictions of Toeplitz operators can be found in the book Furthermore an overview of the Bishop Phelps Bollobás theorem is provided The state of the art of Hardy Littlewood inequalities in sequence spaces is given The chapters are written in a reader friendly style and can be read independently Each chapter contains a rich bibliography This book is intended for use by both researchers and graduate students of mathematics physics and engineering

Contributions in Mathematics and Engineering Panos M. Pardalos, Themistocles M. Rassias, 2016-10-04 The contributions in this volume aim to deepen understanding of some of the current research problems and theories in modern topics such as calculus of variations optimization theory complex analysis real analysis differential equations and geometry Applications to these areas of mathematics are presented within the broad spectrum of research in Engineering Science with particular emphasis on equilibrium problems complexity in numerical optimization dynamical systems non smooth optimization complex network analysis statistical models and data mining and energy systems Additional emphasis is given to interdisciplinary research although subjects are treated in a unified and self contained manner The presentation of methods theory and applications makes this tribute an invaluable reference for teachers researchers and other professionals interested in pure and applied research philosophy of mathematics and mathematics education Some review papers published in this volume will be particularly useful for a broader audience of readers as well as for graduate students who search for the latest information Constantin Carathéodory's wide ranging influence in the international mathematical community was seen during the first Fields Medals awards at the International Congress of Mathematicians Oslo 1936 Two medals were awarded one to Lars V Ahlfors and one to Jesse Douglass It was Carathéodory who presented both their works during the opening of the

International Congress This volume contains significant papers in Science and Engineering dedicated to the memory of Constantin Carathéodory and the spirit of his mathematical influence **Convexity and Concentration** Eric Carlen, Mokshay Madiman, Elisabeth M. Werner, 2017-04-20 This volume presents some of the research topics discussed at the 2014 2015 Annual Thematic Program Discrete Structures Analysis and Applications at the Institute of Mathematics and its Applications during the Spring 2015 where geometric analysis convex geometry and concentration phenomena were the focus Leading experts have written surveys of research problems making state of the art results more conveniently and widely available The volume is organized into two parts Part I contains those contributions that focus primarily on problems motivated by probability theory while Part II contains those contributions that focus primarily on problems motivated by convex geometry and geometric analysis This book will be of use to those who research convex geometry geometric analysis and probability directly or apply such methods in other fields **Harmonic Analysis and Partial Differential Equations** Anatoly Golberg, Peter Kuchment, David Shoikhet, 2023-03-25 Over the course of his distinguished career Vladimir Maz'ya has made a number of groundbreaking contributions to numerous areas of mathematics including partial differential equations function theory and harmonic analysis The chapters in this volume compiled on the occasion of his 80th birthday are written by distinguished mathematicians and pay tribute to his many significant and lasting achievements **Analysis and Geometry of Markov Diffusion Operators** Dominique Bakry, Ivan Gentil, Michel Ledoux, 2013-11-18 The present volume is an extensive monograph on the analytic and geometric aspects of Markov diffusion operators It focuses on the geometric curvature properties of the underlying structure in order to study convergence to equilibrium spectral bounds functional inequalities such as Poincaré Sobolev or logarithmic Sobolev inequalities and various bounds on solutions of evolution equations At the same time it covers a large class of evolution and partial differential equations The book is intended to serve as an introduction to the subject and to be accessible for beginning and advanced scientists and non specialists Simultaneously it covers a wide range of results and techniques from the early developments in the mid eighties to the latest achievements As such students and researchers interested in the modern aspects of Markov diffusion operators and semigroups and their connections to analytic functional inequalities probabilistic convergence to equilibrium and geometric curvature will find it especially useful Selected chapters can also be used for advanced courses on the topic **Harmonic Analysis, Partial Differential Equations, Banach Spaces, and Operator Theory (Volume 2)** María Cristina Pereyra, Stefania Marcantognini, Alexander M.
