Jørgensen,David R. Larson,2006 This book offers a presentation of some new trends in operator theory and operator algebras
with a view to their applications It consists of separate papers written by some of the leading practitioners in the field The
content is put together by the three editors in a way that should help students and working mathematicians in other parts of
the mathematical sciences gain insight into an important part of modern mathematics and its applications While different
specialist authors are outlining new results in this book the presentations have been made user friendly with the aid of
tutorial material In fact each paper contains three things a friendly introduction with motivation tutorial material and new
research The authors have strived to make their results relevant to the rest of mathematics A list of topics discussed in the
book includes wavelets frames and their applications quantum dynamics multivariable operator theory C algebras and von
Neumann algebras Some longer papers present recent advances on particular long standing problems such as extensions and
dilations the Kadison Singer conjecture and diagonals of self adjoint operators *Hopf Algebras and Tensor Categories*
Nicolás Andruskiewitsch,Juan Cuadra,Blas Torrecillas,2013-02-21 This volume contains the proceedings of the Conference on
Hopf Algebras and Tensor Categories held July 4 8 2011 at the University of Almeria Almeria Spain The articles in this
volume cover a wide variety of topics related to the theory of Hopf algebras and its connections to other areas of
mathematics In particular this volume contains a survey covering aspects of the classification of fusion categories using
Morita equivalence methods a long comprehensive introduction to Hopf algebras in the category of species and a summary of
the status to date of the classification of Hopf algebras of dimensions up to 100 Among other topics discussed in this volume
are a study of normalized class sum and generalized character table for semisimple Hopf algebras a contribution to the
classification program of finite dimensional pointed Hopf algebras relations to the conjecture of De Concini Kac and Procesi
