

GENETIC ENGINEERING REVIEW QUESTION

In the space provided list, describe and illustrate the steps of DNA recombination

1. A restriction enzyme cuts the plasmid DNA of a bacteria.
2. The same restriction enzyme then cuts the gene out of the human DNA.
3. A ligase enzyme now attaches the human gene into the open bacterial plasmid.
4. With the human gene in the DNA bacteria, now the bacteria can make a human protein.
5. Since the bacteria does not need the human protein, we can take the protein and use it for our own medicinal purposes.

List and explain as many uses of genetic engineering as possible:

1. Creation of insulin protein.
2. Creation of human growth hormone
3. Creation of pest/disease/frost resistant agriculture.
4. Creation of bacteria that will digest oil/sewage.
