### PLAYGROUND DESIGNER

**PERFORMANCE TASK**

**OVERVIEW** 

You will step into the shoes of a playground designer. Your school has decided to build a new playground with a unique geometric structure. As the lead designer, you have been tasked with determining the measures of various angles to ensure the safety and functionality of the design.

**TASK #1** 

Imagine you are designing a new playground for your school. The playground will have a unique geometric structure, and you have been tasked with determining the measures of various angles to ensure the safety and functionality of the design. In the playground design, there are four angles labeled as A, B, C, and D. You know that:

- Angle A is a right angle (90 degrees).
- Angle B is a supplementary angle to Angle C.
- Angle D is a complementary angle to Angle C.

To find the measures of angles B, C, and D, you need to set up and solve equations based on the given information.

Write an equation to find each angle.

**TASK #2** 

Solve each equation that you wrote in task #1 to find the measure of each angle. Remember, Angle C is 40 degrees.

**PERFORMANCE TASK**

**TASK #3** 

Now that you have found the measures of angles B, C, and D, determine if they add up to form a complete angle (360 degrees) or not. Explain your findings.

**TASK #4** 

Within the playground structure, there are vertical angles formed. Identify the pairs of vertical angles and calculate their measures based on the information you have.

**Striving for Excellence** ,2000      Performance Assessment Brian McLean Semple,1992 The second International Assessment of Educational Progress focused on the mathematics and science achievement of 13 year olds Performance assessments were used as part of the overall assessment in four countries England Scotland Soviet Union and Taiwan and five Canadian provinces The performance assessment approach drew heavily on the experience of the United Kingdom in such assessments but added features to meet the needs of an international study The performance tasks required students to apply concepts observe measure manipulate equipment and materials and record and interpret data Approximately 3 000 students participated in the 1991 mathematics and science assessments Scores varied widely from task to task and from country to country Relative performance of countries and provinces generally differed from those identified by written curriculum based tests A major lesson learned from the experimental test administration is that this form of performance assessment can be used reliably in international comparative studies although at an estimated cost three to four times greater than that for an equivalent number of written test questions Sample mathematics and science tasks are included and there is an appendix on problem solving in mathematics that describes outcomes produced by Scottish students SLD

**Performance-Based Learning** Sally Berman,2008 Provides excellent thorough examples of lessons for classroom use The lessons follow a user friendly pattern and include outstanding rubrics that can be adapted easily by the teacher Debra Rose Howell TeacherMonte Cristo Elementary Granite Falls WA Gives educators new to performance learning a broad collection of examples for using this model The sample lessons are tied to learning standards and incorporate a myriad of different modalities Rachel Moreno Associate Professional SpecialistUniversity of Notre Dame Motivate students and increase their achievement with high interest learning tasks Teachers can promote long lasting learning build higher order thinking skills develop individual student accountability and increase student achievement by incorporating performance learning tasks into the curriculum In this second edition of Performance Based Learning Sally Berman demonstrates how this model can be modified for learners at different grade and ability levels and offers an abundance of sample lesson plans that show how to use performance based learning throughout the content areas The updated edition includes an expanded discussion of cooperative learning teams a new section on how to design effective performance based learning activities and a collection of reproducible masters for planning and implementation Chapters with lesson plans include A performance task to use as is or adapt for specific student groups The curriculum standards related to the task Reflection guidelines to help

*Students at Risk of School Failure* José Jesús Gázquez, José Carlos Núñez, 2018-10-18 The main objective of this Research Topic is to determine the conditions that place students at risk of school failure identifying student and context variables In spite of the fact that there is currently little doubt about how one learns and how to teach in some countries of the developed world there is still there is a high rate of school failure Although the term school failure is a very complex construct insofar as its causes consequences and development from the field of educational psychology the construct student engagement has recently gained special interest in an attempt to deal with the serious problem of school failure School engagement builds on the anatomy of the students involvement in school and describes their feelings behaviors and thoughts about their school experiences So engagement is an important component of students school experience with a close relationship to achievement and school failure Children who self set academic goals attend school regularly and on time behave well in class complete their homework and study at home are likely to interact adequately with the school social and physical environments and perform well in school In contrast children who miss school are more likely to display disruptive behaviors in class miss homework frequently exhibit violent behaviors on the playground fail subjects be retained and if the behaviors persist quit school Moreover engagement should also be considered as an important school outcome eliciting more or less supportive reactions from educators For example children who display school engaged behaviors are likely to receive motivational and instructional support from their teachers The opposite may also be true But what makes student engage more or less The relevant literature indicates that personal variables e g sensory motor neurodevelopmental cognitive motivational emotional behavior problems learning difficulties addictions social and or cultural variables e g negative family conditions child abuse cultural deprivation ethnic conditions immigration or school variables e g coexistence at school bullying cyberbullying may concurrently hinder engagement preventing the student from acquiring the learnings in the same conditions as the rest of the classmates
