Math Work Stations Debbie Diller, 2023-10-10 If you've ever questioned how to make math stations work you'll find this photo-filled idea-packed resource invaluable. This book extends Debbie Diller's best-selling work on literacy work stations and classroom design to the field of mathematics. In *Math Work Stations* you'll find ideas to help children develop conceptual understanding and skills, use math vocabulary as they talk about their mathematical thinking, and connect big ideas to meaningful independent exploration and practice. This book details how to set up, manage, and keep math stations going throughout the year. There's even a chapter devoted solely to organizing and using math manipulatives. Each chapter includes key concepts based on NCTM and state math standards, math vocabulary resources, and literature links suggested materials to include at each station for the corresponding math content strand, ideas for modeling, troubleshooting, differentiating, and assessment, and reflection questions for professional development. Throughout the book, Debbie has included hundreds of color photos showing math work stations in action from a variety of classrooms in which she has worked. Charts, reproducible forms, and math work stations icons are included to provide everything you'll need to get started with stations in your classroom right away.

Visual-Spatial Thinking for Advanced Learners, Grades 3-5 Emily Hollett, Anna Cassalia, 2022-07-29 *Visual Spatial Thinking for Advanced Learners, Grades 3-5* will teach students how to perceive and represent visual information and to mentally manipulate objects within space. Voicing Code in STEM
Pratim Sengupta, Amanda Dickes, Amy Voss Farris, 2021-03-09. An exploration of coding that investigates the interplay between computational abstractions and the fundamentally interpretive nature of human experience. The importance of coding in K-12 classrooms has been taken up by both scholars and educators. *Voicing Code in STEM* offers a new way to think about coding in the classroom, one that goes beyond device-level engagement to consider the interplay between computational abstractions and the fundamentally interpretive nature of human experience. Building on Mikhail Bakhtin's notions of heterogeneity and heteroglossia, the authors explain how STEM coding can be understood as voicing computational utterances rather than a technocentric framing of building computational artifacts. Empirical chapters illustrate this theoretical stance by investigating different framings of coding as voicing.
