### **Addressing nonresponse for categorical data items using full information maximum likelihood with Latent GOLD 5.0**

Susan Laine Edwards, Marcus Berzofsky, Paul P. Biemer, 2018-09-26 Full information maximum likelihood FIML is an important approach to compensating for nonresponse in data analysis Unfortunately only a few software packages implement FIML and even fewer have the capability to compensate for missing not at random MNAR nonresponse One of these packages is Statistical Innovations Latent GOLD however the user documentation for Latent GOLD provides no mention of this capability The purpose of this paper is to provide guidance for fitting MNAR FIML models for categorical data items using the Latent GOLD 5.0 software By way of comparison we also provide guidance on fitting FIML models for nonresponse missing at random MAR using the methods of Fuchs 1982 and Fay 1986 who incorporated item nonresponse indicators within a structural modeling framework We compare both FIML for MAR and FIML for MNAR nonresponse models for independent and dependent variables Also we provide recommendations for future applications of FIML using Latent GOLD     *Managing Smoke at the Wildland-urban Interface* Dale D. Wade, 2007

When prescribed burning is conducted at the wildland urban interface WUI the smoke that is produced can sometimes inconvenience people but it can also cause more serious health and safety problems The public is unlikely to continue to tolerate the use of prescribed fire regardless of the benefits if burn managers cannot keep smoke out of smoke sensitive areas In the South forest management organizations commonly require that plans for prescribed burns pass a smoke screening review and some States require such a review before they will authorize a burn Current screening systems however do not incorporate criteria for use at the WUI This guide describes modifications to the Southern Smoke Screening

System for burns at the WUI These modifications couple new research findings with the collective experience of burners who have extensively used the 1976 Southern Smoke Screening System This new smoke screening system is designed for use on burns less than 50 acres in size and has undergone several years of successful field testing in Florida
