

Using the Neurobehavioral Cognitive Status Examination as a Screening Measure for Older Adults

We evaluated the ability of the Neurobehavioral Cognitive Status Examination (NCSE) to accurately distinguish between healthy older adults and geriatric patients suffering from dementia. Although the NCSE correctly identified all dementia patients, it produced an unacceptably high rate of false positives among the healthy elderly (70%). Despite the NCSE's lack of specificity when using the recommended classification criteria, significant group differences were found on several individual subscales and on the total number of subscales passed. These findings suggest the need to further evaluate the appropriateness of the geriatric norms for the NCSE and highlight some of the unique considerations involved in the assessment of older adults. © 1997 National Academy of Neuropsychology

Clinical neuropsychologists are poised to play a pivotal role in the care and treatment of the ever-increasing geriatric segment of the population through the process of ongoing cognitive assessment and functional evaluation. More than ever before, geriatric care facilities are regularly faced with the need to obtain neuropsychological evaluation of their residents for purposes that include differential diagnosis, placement, and an assessment of needs regarding nursing requirements and level of general care. The demand for sensitive cognitive screening measures that can be employed in an expedient, valid fashion is reinforced by the realization that the elderly are particularly susceptible to potentially reversible causes of cognitive impairment related to such etiologies as depression and a sensitivity to the effects of medication.

Several widely used screening instruments for use with older adults suffer from a lack of sensitivity and an inability to provide more than a dichotomous classification of patients as either cognitively impaired or non-impaired (Osato, Yang, & La Rue, 1993). The Neurobe-

Vanderploeg, 2014-04-04. Neuropsychological assessment is a difficult and complicated process. Often experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error. Since formal test data on the surface appear unambiguous and objective they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity reliability and interpretability of test data. But interpretation is far from straightforward and a pragmatic application of assessment results requires attention to a multitude of issues. This long awaited updated and greatly expanded second edition of the Clinician's Guide to Neuropsychological Assessment like the first focuses on the clinical practice of neuropsychology. Orienting readers to the entire multitude of issues it guides them step by step through evaluation and helps them avoid common misconceptions mistakes and methodological pitfalls. It is divided into three sections fundamental elements of the assessment process special issues settings and populations and new approaches and methodologies. The authors all of whom are actively engaged in the clinical practice of neuropsychological assessment as well as in teaching and research do an outstanding job of integrating the academic and the practical. The Clinician's Guide to Neuropsychological Assessment Second Edition will be welcomed as a text for graduate courses but also as an invaluable hands on handbook for interns postdoctoral fellows and experienced neuropsychologists alike. No other book offers its combination of breadth across batteries and approaches depth and practicality. **Handbook on the Neuropsychology of Aging and Dementia** Lisa D. Ravdin, Heather L. An Assessment Guide To Geriatric Neuropsychology Holly Tuokko, Thomas Hadjistavropoulos, 2014-04-04 At least half of all neuropsychological assessments are performed on elderly persons but the information clinicians need to make appropriate judgment calls is widely scattered Several books offering general descriptions of the cognitive functioning of the aged or of neuropsychological conditions affecting them are helpful to practitioners but do not provide reliable and valid normative information Two books that do provide this information do not focus on geriatric populations A concise yet comprehensive summary of what we now know about those over 65 with an extensive bibliography *An Assessment Guide to Geriatric Neuropsychology* fills the gap The neuropsychological assessment of elderly persons involves not only the performance based measurement of various capacities but heavy reliance on reports from caregivers both formal and informal about the day to day functioning of the affected person It also raises important yet often neglected ethical concerns The authors discuss all the measures that detect and discriminate among cognitive disorders of elderly persons including special measures relevant to caregiver reports and provide useful tables to assist in differential diagnosis They also reflect on the ethical issues that often confront the assessor of an elderly individual informed consent confidentiality the right of bodily autonomy and self determination and appropriate feedback This book will be an invaluable resource for all those called on to evaluate older clients

Reliability and Validity in Neuropsychological Assessment Michael D. Franzen, 2013-11-21 No other book reviews clinical neuropsychological assessment from an empirical psychometric perspective In this completely revised and updated 2nd edition the concepts and methods of psychometric neuropsychology are presented as a framework by which to evaluate current instruments Newer methodologies and statistical techniques are discussed such as meta analysis effect size confirming factor analysis and ecological validity The explosion of research in this area since the publication of the first edition in 1989 has been incorporated including a greatly expanded chapter on child assessment instruments This volume is a must for the bookshelf of every clinical neuropsychologist as well as researchers and students Anyone conducting forensic evaluations will especially find useful the information on reliability and validity when preparing for court appearances
