LAB EXERCISE 5: Lizard Evolution Virtual Lab

Answer the following questions as you finish each module in the virtual lab.

MODULE 1: Introduction

At the beginning of the virtual lab, you were asked to select eight lizards from a category. What criteria did you use to select your lizards?

My criteria were: color, size, and shape.

Did your lizards grow similar? How? Why?

Yes, they all grew to the same size. I thought about choosing lizards that were all the same color, but I chose lizards that were all the same size, and I thought that would be better.

An adaptation is a structure or function that the organism has as a population because it increases the ability to survive and reproduce in a particular environment. Provide one example and an explanation of an adaptation in the lizard lab.

The adaptation of the lizard's skin, which is covered with scales, is an adaptation because it helps the lizard to survive in its environment by protecting it from predators.

Provide one evolutionary explanation for why lizards that are not growing (i.e., that grow) would have survived a transformation.

Because the lizards that were not growing were able to survive in their environment, they were able to reproduce and pass on their genes to the next generation.
