Blending Qualitative and Quantitative Research Methods in Theses and Dissertations R. Murray Thomas, 2003-03-14 Aimed at empowering students with the information necessary to choose the best approach to fit their needs the text outlines numerous research options from varying viewpoints and highlights the procedures involved with putting each method into practice Qualitative Research Journal This book offers a broad spectrum of research methodologies within one text that is easy to understand R Murray Thomas examines educational research as a series of simple and complex questions This integrated presentation of research methodologies makes this a unique text Roxana Della Vecchia Assistant Dean College of Education Towson University Traditionally graduate students have written theses and dissertations that take either qualitative or quantitative approach But in the current environment many students are opting for a mixed methods approach that combines some quantitative methods with qualitative methods This is a growing trend yet no book exists that applies mixed methods to writing the dissertation or theses This book aims to fill that gap

Structures: A Geometric Approach Edmond Saliklis, 2018-11-07 Graphic methods for structural design essentially translate problems of algebra into geometric representations allowing solutions to be reached using geometric construction ie drawing pictures instead of tedious and error prone arithmetic This was the common method before the invention of calculators and computers but had been largely

abandoned in the last half century in favor of numerical techniques. However, in recent years the convenience and ease of graphic statics has made a comeback in architecture and engineering. Several professors have begun using graphic statics in the classroom and studio environment. But until now there had been no guidebook that rapidly brings students up to speed on the fundamentals of how to create graphical solutions to statics problems. *Graphic Statics* introduces all of the traditional graphic statics techniques in a parametric drawing format using the free program GeoGebra. Then advanced topics such as indeterminate beams and three dimensional curved surfaces are covered. Along the way links to wider design ideas are introduced in a succinct summary of the steps needed to create elegant solutions to many static equilibrium problems. Meant for students in civil and architectural engineering, architecture and construction, this practical introduction will also be useful to professionals looking to add the power of graphic statics to their work. Intelligent Tutoring Systems Barry P. Goettl, Henry M. Halff, Carol L. Redfield, Valerie J. Shute, 2003-06-29 The first International Conference on Intelligent Tutoring Systems ITS was held ten years ago in Montreal ITS 88. It was so well received by the international community that the organizers decided to do it again in Montreal four years later in 1992 and then again in 1996 ITS 98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal and it's only been two years not four since the last one. One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization e.g. IEEE or AACE. Rather the founder of these conferences, Claude Frasson, started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues. Thus the unifying theme is science. This year's hot topics differ from those in the earlier ITS conferences as they reflect ever changing trends in ITS research. A few of the issues being examined at ITS 98 include Web based tutoring systems, deploying ITS in the real world, tutoring and authoring tools, architectures and knowledge structure and representation.
