

Let  $\mathcal{L}$  be the well-known standard language of propositional logic. Now we define the language  $\mathcal{LRP}$  of propositional formulas in *Reverse Polish notation*, as follows:

- i Each propositional atom  $p_i$  is a well-formed reverse Polish formula in  $\mathcal{LRP}$ .
- ii If  $A$  and  $B$  are well-formed reverse Polish formulas in  $\mathcal{LRP}$ , then so are  $A\neg$ ,  $AB\wedge$ ,  $AB\vee$ ,  $AB\rightarrow$  and  $AB\leftrightarrow$ .
- iii Nothing is a well-formed reverse Polish formula in  $\mathcal{LRP}$  unless it is generated by finitely many repeated applications of i and ii.

So reverse Polish notation gives a postfix-version without parentheses of propositional formulas. For example, the formula  $p_1\neg p_2\wedge\neg$  in reverse Polish notation is logically equivalent to the formula  $\neg(\neg p_1\wedge p_2)$  in standard notation.

1. Is  $p_1\neg p_2\neg\vee p_2p_3\wedge\rightarrow$  a well-formed reverse Polish formula in  $\mathcal{LRP}$ ? Why (not)?
2. Show by induction that every well-formed formula  $P$  in the language  $\mathcal{L}$  of propositional logic is equivalent to a well-formed formula  $P'$  in reverse Polish notation in  $\mathcal{LRP}$ . Prove this in two steps:
  - (a) Define  $P'$  by induction on well-formed formulas of propositional logic.
  - (b) Prove by induction that for every formula  $P$  of propositional logic,  $P'$  is logically equivalent to  $P$ , that is, for all valuations  $v$ ,  $v(P') = v(P)$ .  
 Explicitly formulate an induction hypothesis.  
 (Here, you may assume that someone else has already proved by induction that for every well-formed propositional formula  $P$  in  $\mathcal{L}$ , the formula  $P'$  is in  $\mathcal{LRP}$ .)

A Protocol-theoretic Framework for the Logic of Epistemic Norms Ralph Jenkins, 2022-09-26 This book defines a logical system called the Protocol theoretic Logic of Epistemic Norms PLEN it develops PLEN into a formal framework for representing and reasoning about epistemic norms and it shows that PLEN is theoretically interesting and useful with regard to the aims of such a framework In order to motivate the project the author defends an account of epistemic norms called epistemic proceduralism The core of this view is the idea that in virtue of their indispensable regulative role in cognitive life epistemic norms are closely intertwined with procedural rules that restrict epistemic actions procedures and processes The resulting organizing principle of the book is that epistemic norms are protocols for epistemic planning and control The core of the book is developing PLEN which is essentially a novel variant of propositional dynamic logic PDL distinguished by more or less elaborate revisions of PDL s syntax and semantics The syntax encodes the procedural content of epistemic norms by means of the well known protocol or program constructions of dynamic and epistemic logics It then provides a novel language of operators on protocols including a range of unique protocol equivalence relations syntactic operations on protocols and various procedural relations among protocols in addition to the standard dynamic modal operators of PDL The semantics of the system then interprets protocol expressions and expressions embedding protocols over a class of directed multigraph like structures rather than the standard labeled transition systems or modal frames The intent of the system is to better represent epistemic dynamics build a logic of protocols atop it and then show that the resulting logic of protocols is useful as a logical framework for epistemic norms The resulting theory of epistemic norms centers on notions of norm equivalence derived from theories of process equivalence familiar from the study of dynamic and modal logics The canonical account of protocol equivalence in PLEN turns out to possess a number of interesting formal features including satisfaction of important conditions on hyperintensional equivalence a matter of recently recognized importance in the logic of norms generally To show that the system is interesting and useful as a framework for representing and reasoning about epistemic norms the author applies the logical system to the analysis of epistemic deontic operators and partly on the basis of this establishes representation theorems linking protocols to the action guiding content of epistemic norms The protocol theoretic logic of epistemic norms is then shown to almost immediately validate the main principles of epistemic proceduralism

Fuzzy Logic And Soft Computing Bernadette Bouchon-meunier, Ronlad R Yager, Lotfi A Zadeh, 1995-09-15 Soft computing is a new emerging discipline rooted in a group of technologies that aim to exploit the tolerance for imprecision and uncertainty in achieving solutions to complex problems The principal components of soft computing are fuzzy logic neurocomputing genetic algorithms and probabilistic reasoning This volume is a collection of up to date articles giving a snapshot of the current state of the field It covers the whole expanse from theoretical foundations to applications The contributors are among the world leaders in the field

**Inductive Logic** Dov M. Gabbay, John Hayden Woods, 2004 In

designing the Handbook of the History of Logic the Editors have taken the view that the history of logic holds more than an antiquarian interest and that a knowledge of logic's rich and sophisticated development is in various respects relevant to the research programmes of the present day. Ancient logic is no exception. The present volume attests to the distant origins of some of modern logic's most important features such as can be found in the claim by the authors of the chapter on Aristotle's early logic that from its infancy the theory of the syllogism is an example of an intuitionistic non monotonic relevantly paraconsistent logic. Similarly in addition to its comparative earliness what is striking about the best of the Megarian and Stoic traditions is their sophistication and originality.

**Elucidating the Tractatus** Marie McGinn, 2009-08-06 Marie McGinn provides a clear and original interpretation of Wittgenstein's Tractatus and of its relation to Wittgenstein's later work. It is one of the most famous works of early analytic philosophy the interpretation of which has always been a matter for controversy and is currently the focus of considerable philosophical debate.

*Logical Methods* John N. Crossley, Jeffrey B. Remmel, Richard Shore, Moss E. Sweedler, 1994-01-26 The twenty six papers in this volume reflect the wide and still expanding range of Anil Nerode's work. A conference on Logical Methods was held in honor of Nerode's sixtieth birthday 4 June 1992 at the Mathematical Sciences Institute Cornell University 1-3 June 1992. Some of the conference papers are here but others are from students co-workers and other colleagues. The intention of the conference was to look forward and to see the directions currently being pursued in the development of work by or with Nerode. Here is a brief summary of the contents of this book. We give a retrospective view of Nerode's work. A number of specific areas are readily discerned: recursive equivalence types, recursive algebra and model theory, the theory of Turing degrees and  $\mathcal{R}$ -sets, polynomial time computability and computer science. Nerode began with automata theory and has also taken a keen interest in the history of mathematics. All these areas are represented. The one area missing is Nerode's applied mathematical work relating to the environment. Kozen's paper builds on Nerode's early work on automata. Recursive equivalence types are covered by Dekker and Barback the latter using directly a fundamental metatheorem of Nerode. Recursive algebra is treated by Ge Richards group representations. Recursive model theory is the subject of papers by Hird, Moses and Khossainov. Dadajonov while a combinatorial problem in recursive model theory is discussed in Cherlin Martin's paper. Cenzer presents a paper on recursive dynamics.

**Handbook of Logic and Language** Johan F.A.K. van Benthem, Alice ter Meulen, 2010-12-17 The logical study of language is becoming more interdisciplinary playing a role in fields such as computer science, artificial intelligence, cognitive science and game theory. This new edition written by the leading experts in the field presents an overview of the latest developments at the interface of logic and linguistics as well as a historical perspective. It is divided into three parts covering Frameworks, General Topics and Descriptive Themes. Completely revised and updated includes over 25% new material. Discusses the interface between logic and language. Many of the authors are creators or active developers of the theories.

### **Logical Frameworks for Truth and Abstraction A.**

Cantini,1996-03-14 This English translation of the author s original work has been thoroughly revised expanded and updated The book covers logical systems known as type free or self referential These traditionally arise from any discussion on logical and semantical paradoxes This particular volume however is not concerned with paradoxes but with the investigation of type free sytems to show that i there are rich theories of self application involving both operations and truth which can serve as foundations for property theory and formal semantics ii these theories provide a new outlook on classical topics such as inductive definitions and predicative mathematics iii they are particularly promising with regard to applications Research

arising from paradoxes has moved progressively closer to the mainstream of mathematical logic and has become much more prominent in the last twenty years A number of significant developments techniques and results have been discovered Academics students and researchers will find that the book contains a thorough overview of all relevant research in this field
