A Fork in the Road J. Michael Wilhelm,2018-11-02 A Fork in the Road presents the narrative approach to problem solving often employed by mediators and therapists as lens through which school system leaders can view the component parts of the difficult issues they face to better define and resolve them Narrative problem solving is based on the precept that humans construct an understanding of their problems from the stories they hear and tell about those problems Therapists and mediators deliberately mine these narratives to understand the origin nature and the extent of their client s problem and to reveal the alternative storylines and possible resolutions embedded in those stories This same approach can allow board members practicing and aspiring superintendents and other school administrators to view an institutional problem from a

distance and learn the differing perspectives of those involved and affected to better understand the problem's reach and risks and explore possible solutions. The book provides an explanation of narrative problem solving and a series of essential questions to guide the reader through the process. It offers twelve stories in narrative form that invite the reader to explore institutional challenges through the narrative lens. An analysis of each story explores the possible path to resolution embedded in the stories.

Cellular Obsession: How Smartphones, and the Internet of Things Are Going to Change Your Life Nick Vulich, 2017-08-06. Mobile will change everything again. George Orwell's paranoid vision of 1984 is here. Only it isn't Big Brother who is watching us. It's Big Data. Here's the deal: Google, Apple, and Microsoft are all attempting to do the same thing. They are trying to get your device to learn enough about you so it can anticipate what you want to do next and provide the appropriate information just as you need it. Rafe Needleman described it best in an article he authored for Yahoo Tech. He said artificial intelligence will be somewhat like auto correct. Your smartphone will auto suggest what you should do next based on your history. To do that, your smartphone would draw on your prior browsing history and what it knows about you from your GPS location services, your text messages, and your emails. The hard part is getting your phone to think contextually. As human beings, we can put things in context based on what's happening now. For example, let's say you are sitting in your house. You smell something burning and see smoke coming from the kitchen. The next thing you know, the smoke alarm goes off. Most people can put two and two together to determine something is wrong. They understand that maybe the house is on fire. A normal person is either going to check it out or dial 911 and run out of the house screaming fire. Here's a tougher one. Let's say you have an appointment set to replace your windshield at 9:15. The Glass Barn texts you to say they are running an hour behind schedule. Is that okay? Or would you like to reschedule? That text is buried among several other messages. Most of them are junk. A coupon for a dollar off a sandwich, free drinks at the bar down the street, and a contest entry. Which messages should your phone hide or display? Most people would say the message from the Glass Barn should be displayed first because it's more urgent. But how do you teach a chunk of metal and memory chips to make that decision? That's the real challenge. When contextual intelligence works, it's amazing. The problem is that right now, your phone gets it right less than a third of the time. Google is working hard to improve on that number. Their future depends on getting it right. Time Magazine ran an article by Victor Lorkson a while back titled "Google Searches for Its Future." The premise was it's a whole new world out there. Google became the go-to search engine because of their excellence in desktop search, but mobile has changed everything. If Google wants to survive, they need to reinvent themselves. The future is mobile, and Google has determined the only way they can survive in this new reality is to focus on voice search, and Google Now. Want to know more? Buy the book. Lean why cellular is the future of everything.

Star-Crossed L. Loryn, 2018-12-29. He was sent to kill him, but when he saw his face, he couldn't pull the trigger. After the death of his first love and his father, the only thing Ajax had left was work and memories. And he's okay with that until a person from his past walks back into his life at the worst possible moment. The

problem is he's been alone so long that he doesn't know what to do or say Plus he's not even sure if he wants to open himself up just to lose another person Is it really worth it Orion's in a situation His father hates him his husband uses him and when he sees a way out he takes it even though it means traveling with an assassin a beautiful assassin who threatens to take his life at every turn But anything is better than what he had before right Right This novel is a STAND ALONE novel but it helps if you read the prequel before jumping into this story
