This book fulfils the need to keep up with the high number of innovations in proteomics and at the same time to warn the readers about the danger of manufacturers and scientists claims around new technologies Mass spectrometry stands as the core technology in proteomics The emerging field of targeted proteomics and its potential applications in the cardiovascular arena are also reviewed and discussed A concluding section highlights the promise of proteomics in the light of these recent developments As this technique and its applications have undergone remarkable advances in the past years recent updates on proteomic applications are covered Another key concept revealed by proteomic technologies is that the extent of protein post translational modifications PTMs as well as their impact on the phenotype has been underestimated by pre proteomics science As such part of the manual focuses on the emerging role of PTMs in basic cardiovascular sciences and in the clinics In fact there is an emerging consensus that the detailed annotation of protein PTMs could lead to a more in depth representation of biological systems translating into more specific targets for therapy as well as biomarkers Moreover a recent trend is so called targeted proteomics The approach was awarded the title of Method of the Year by Nature in 2013 see the editorial by Vivien Marx in 1st issue of Nature in Jan 2013 According to a few proteomic scientists the emphasis should not be placed on generating long lists of proteins but lists of proteins with a true biological meaning

unsatisfactory results Hopefully if we know how a graphics system works and what basic functions many graphics tools provide we can understand and employ some graphics tools without spending much precious time on learning all the details that may not be applicable and we can become graphics experts through such a shortcut Overview This book aims to be a shortcut to graphics theory programming tools and applications It covers all graphics basics and several advanced topics without including some implementation details that are not necessary in graphics applications It categorizes current graphics tools according to their applications and provides many weblinks to important resources on the Internet The purpose is to provide an exhaustive list of graphics tools with their major applications and functions The reference list may contain some inaccuracies since new tools are constantly emerging VI Preface and old tools become obsolete Through explaining and categorizing these graphics tools and their primary applications we hope to provide learners and researchers with different means and application areas in computer graphics and help them understand and use visualization modeling animation simulation virtual reality and many online resources
