Advanced Flood Control System with Emergency Power and Drinking Water Mark Fennell,2017-11-12 Imagine a world where major floods never occur again The rain comes down but water never fills the streets No property is damaged and no lives are lost Can this really exist Yes we can have this type of Flood Management What we need is not just more of the same designs but something completely new We require a design which is completely different a comprehensive system which will truly manage the flood waters and so much more The system described in this book is such a design Using this Advanced Flood Control System Streets will never fill with water more than a few inches Water will be drained as soon as it falls to the ground There will be no stoppage or back flow in drainage Containment Units will be sized appropriately River over flow will rarely be a problem Flood management will be much more effective In addition this Advanced Flood Control System provides many other solutions which few other systems offer These benefits include Emergency Electrical Power throughout the region Clean Drinking Water for the public Preservation of hospitals and waste sites Limited effects on existing infrastructure Long Term Storage of water as desired Emergency Escape Routes and Shelters Maintenance which is simple and efficient Structures which last over 200 years When installed properly this Advanced Flood Control System will provide all of these benefits and more This book offers the detailed designs for the Advanced Flood Control System The structures and processes are described along with numerous detailed pictures If we are fully committed to this project then we can prevent major flooding in most regions of the world Please note that there are two versions of this Design available Abridged and Full The Abridged version describes the system briefly with only 25 pages of text The remaining pages are filled with full color 3 Dimensional illustrations The Full version provides all the details of the system It is the Abridged version plus much more The Full version offers numerous details on construction These construction details include where to site the structures how to size each component materials to use and other building tips The Full Version also describes in greater detail how the system works and why each component is designed in a particular way The book on this Amazon page is the Abridged Version **Floodplain Management** Bob Freitag,Susan Bolton,Frank Westerlund,Julie Clark,2012-06-22 A flooding river is very hard to stop Many residents of the United States have discovered this the hard way Right now over five million Americans hold flood insurance policies from the National Flood Insurance Program which estimates that flooding causes at least six billion dollars in damages every year Like rivers after a rainstorm the financial costs are rising along with the toll on residents And the worst is probably yet to come Most scientists believe that global climate change will result in increases in flooding The authors of this book present a straightforward argument the time to stop a flooding rivers is before is before it floods Floodplain Management outlines a new paradigm for flood management one that emphasizes cost effective long term

success by integrating physical chemical and biological systems with our societal capabilities It describes our present flood management practices which are often based on dam or levee projects that do not incorporate the latest understandings about river processes And it suggests that a better solution is to work with the natural tendencies of the river retreat from the floodplain by preventing future development and sometimes even removing existing structures accommodate the effects of floodwaters with building practices and protect assets with nonstructural measures if possible and with large structural projects only if absolutely necessary **Flood Prevention, Reforestation, Navigation** Flood Commission of Pittsburgh,1923 **Homeowner's Guide to Retrofitting** ,1998 **Homeowner's Guide to Retrofitting** United States. Flood Damage Prevention Tennessee Valley Authority. Library,1966 **Managing Flood Risk** Anna Serra-Llobet,G. Mathias Kondolf,Kathleen Schaefer,Scott Nicholson,2018-03-31 The past half century has seen an evolution in thinking from flood control to flood risk management recognizing that risk results from both hazard and vulnerability Rather than rely only

on engineering structures to reduce flood magnitude or extent recent policies emphasize avoiding construction in flood prone areas or moving people from floodplains reducing impacts on exposed populations through early warning systems and insurance to aid in recovery Implementing this new approach faces many challenges but also offers opportunities for synergies as described in this book for a range of large floodplain rivers and smaller urban streams across North America and Europe This book is unique in presenting the voices of those on the front lines of implementing a new paradigm in flood risk management each river with a unique set of challenges and opportunities derived from its specific geography as well as differences in governance between the American and European contexts
