**Introduction to Fuzzy Logic using MATLAB** S.N. Sivanandam,S. Sumathi,S. N. Deepa,2006-10-28 Fuzzy Logic at present is a hot topic among

academicians as well various programmers This book is provided to give a broad in depth overview of the field of Fuzzy Logic

The basic principles of Fuzzy Logic are discussed in detail with various solved examples The different approaches and

solutions to the problems given in the book are well balanced and pertinent to the Fuzzy Logic research projects The

applications of Fuzzy Logic are also dealt to make the readers understand the concept of Fuzzy Logic The solutions to the

problems are programmed using MATLAB 6 0 and the simulated results are given The MATLAB Fuzzy Logic toolbox is

provided for easy reference **Principles of Adaptive Filters and Self-learning Systems** Anthony Zaknich,2005-08-19

The topics of control engineering and signal processing continue to flourish and develop In common with general scientific investigation new ideas concepts and interpretations emerge quite spontaneously and these are then discussed used

discarded or subsumed into the prevailing subject paradigm Sometimes these innovative concepts coalesce into a new sub

discipline within the broad subject tapestry of control and signal processing This preliminary battle between old and new

usually takes place at conferences through the Internet and in the journals of the discipline After a little more maturity has

been acquired by the new concepts then archival publication as a scientific or engineering monograph may occur A new

concept in control and signal processing is known to have arrived when sufficient material has evolved for the topic to be

taught as a specialised tutorial workshop or as a course to undergraduate graduate or industrial engineers Advanced

Textbooks in Control and Signal Processing are designed as a vehicle for the systematic presentation of course material for

both popular and innovative topics in the discipline It is hoped that prospective authors will welcome the opportunity to

publish a structured and systematic presentation of some of the newer emerging control and signal processing technologies

in the textbook series *Learning and Soft Computing* Vojislav Kecman,2001 This textbook provides a thorough

introduction to the field of learning from experimental data and soft computing Support vector machines SVM and neural networks NN are the mathematical structures or models that underlie learning while fuzzy logic systems FLS enable us to embed structured human knowledge into workable algorithms The book assumes that it is not only useful but necessary to treat SVM NN and FLS as parts of a connected whole Throughout the theory and algorithms are illustrated by practical examples as well as by problem sets and simulated experiments This approach enables the reader to develop SVM NN and FLS in addition to understanding them The book also presents three case studies on NN based control financial time series analysis and computer graphics A solutions manual and all of the MATLAB programs needed for the simulated experiments are available
