Models of Sharing Graphs Masahito Hasegawa, 2012-12-06 Models of Sharing Graphs presents a sound mathematical basis for reasoning about models of computation involving shared resources including graph rewriting systems denotational semantics and concurrency theory An algebraic approach based on the language of category theory is taken throughout this work which enables the author to describe several aspects of the notion of sharing in a systematic way In particular a novel account of recursive computation created from cyclic sharing is developed using this framework Graph Theory for Operations Research and Management: Applications in Industrial Engineering Farahani, Reza Zanjirani, Miandoabchi, Elnaz, 2012-12-31 While typically many approaches have been mainly mathematics focused graph theory has become a tool used by scientists researchers and engineers in using modeling techniques to solve real world problems Graph Theory for Operations Research and Management Applications in Industrial Engineering presents traditional and contemporary applications of graph theory in the areas of industrial engineering management science and applied operations research This comprehensive collection of research introduces the useful basic concepts of graph theory in real world applications

Logic Synthesis for Asynchronous Controllers and Interfaces J. Cortadella, M. Kishinevsky, A. Kondratyev, Luciano Lavagno, Alex Yakovlev, 2012-12-06 This book is the result of a long friendship of a broad international co operation and of a bold dream It is the summary of work carried out by the authors and several other wonderful people during more than 15 years across 3 continents in the course of countless meetings workshops and discussions It shows that neither language nor distance can be an obstacle to close scientific cooperation when there is unity of goals and true collaboration When we started we had very different approaches to handling the mysterious almost magical world of asynchronous circuits Some were more theoretical some were closer to physical reality some were driven mostly by design needs In the end we all shared the same belief that true Electronic Design Automation research must be solidly grounded in formal models practically minded to avoid excessive complexity and tested in the field in the form of experimental tools The results are this book and the CAD tool petrify The latter can be downloaded and tried by anybody bold or desperate enough to tread into the clockless but not lawless domain of small scale asynchronicity The URL is <http://www.lsi.upc.es/rjordic/petrify> We believe that asynchronous circuits are a wonderful object that abandons some of the almost militaristic law and order that governs synchronous circuits to improve in terms of simplicity energy efficiency and performance *Dissertation Abstracts*
