Liptak's acclaimed bible of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of *Process Control and Optimization* continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their advice has been repeatedly tested in real life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective. *Bla G Liptak speaks on Post Oil Energy Technology on the AT T Tech Channel*

Redneck Halo Sherri Cone, 2013-05-28 *Redneck Halo* is not your ordinary book on bold faith. It is faith that is stubborn, daring, and provocative. In this spiritually charged portrait of life, Sherri Cone shares the story of Star, a countrified vixen in search for God's truth. When Star and Constantine were surrounded by police for grand theft auto, the army of heaven laid a brass foundation. As Star implements twelve key principles to her life, God opened the flood gates of heaven and poured out so many blessings she could hardly contain them. This story will move passive Christians to their tenacity and ignite doubters and unbelievers to all step out, spiritually charged up, and reach for the success that waits you. That's the greatest story I have ever heard. *Julio Lopez, age 20*

Scientific and Technical Aerospace Reports, 1987 *Killer Robots* Armin Krishnan, 2016-04-22 Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles (UCAVs) and unmanned ground vehicles (UGVs) could soon be introduced to the battlefield. Look further into the future, and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions. This growing automation of warfare may come to represent a major discontinuity in the history of warfare: humans will first be removed from the battlefield, and may one day even be largely excluded from the decision cycle in future high-tech and high-speed robotic warfare. Although the current technological issues will no doubt be overcome, the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns. Armin Krishnan explores the technological, legal, and ethical issues connected to combat robotics, examining both the opportunities and limitations of autonomous weapons. He also proposes solutions to the future regulation of military robotics through international law. *Japan Telecommunications*, 1988
