Bradshaw, 2010-09-11 It is important to include Tuber and Root Crops in the Handbook of Plant Breeding They include starchy staple crops that are of increasing importance for global food security and relief of poverty important millennium goals for the United Nations Indeed 2008 was the UN International Year of the Potato in recognition of this role of the potato as the world s third most important food crop after wheat and rice The other major staples are cassava sweetpotato and yam Together they occupy about 50 million hectares with production at 640 million metric tons of which 70% is in developing countries In total there are more than 30 species of Root and Tuber Crops grown in the world today Given the content of other volumes in the series it makes sense to include sugar and fodder beets swedes and turnips and minor root and tuber crops so that the book series is as complete as possible Like the other volumes in the series this one will present information on the latest in applied plant breeding using the current advances in the field from an efficient use of genetic resources to the impact of biotechnology in plant breeding Seven crop specific chapters are proposed together with an introduction to this diverse set of plant species Outstanding scientists for each crop species are proposed as senior authors who may invite co authors to contribute part of a

chapter In order to increase the overall acceptance of the volume balance will be sought with authors from different research groups countries who will be asked to contribute and collaborate where appropriate The book should be of interest to researchers in both academic and industrial settings and in both developed and developing countries as well as students and teachers of plant breeding It is currently extremely important to educate and train a new generation of plant breeders given the challenges faced by humankind in producing more food for an expanding global population during a period of environmental including climate change ncRNAs: Mediated Regulation Channapatna S. Prakash, Muhammad Waseem, Sajid Fiaz, 2024-11-04 Non coding RNAs ncRNAs are a class of RNA molecules that do not encode proteins but play pivotal roles in regulating gene expression and cellular processes Emerging evidence suggests that ncRNAs have evolved as key regulators in mediating adaptive responses to environmental constraints By modulating gene expression ncRNAs enable organisms to fine tune their physiological and cellular processes to maintain homeostasis under different environmental conditions Understanding the biological function of ncRNAs in response to environmental stimuli is crucial for unraveling the complex regulatory networks that underlie adaptation and survival This book explores various types of ncRNAs including microRNAs miRNAs long non coding RNAs lncRNAs and circular RNAs circRNAs and their involvement in the modulation of gene expression networks in plants to adapt to changing environmental conditions Additionally the book discusses the mechanisms by which ncRNAs interact with their target molecules such as mRNAs and proteins to exert regulatory effects This information about nRNA response to environmental stresses acting as regulators of cellular processes and stress related signaling pathways for improving crop production are lying unorganized in different articles of journals and edited books Therefore it is time demanding to publish a book dealing with these aspects The introduction discusses the significance of understanding ncRNA mediated regulation in the context of adaptation and survival in changing environmental conditions By providing a comprehensive overview this sets the stage for the subsequent chapters Chapters then delve into the role of ncRNAs in epigenetic regulation and transgenerational effects and explore how ncRNAs participate in shaping the epigenome and influencing heritable gene expression without altering the DNA sequence This book discusses the implications of ncRNA mediated epigenetic regulation in adapting to environmental challenges and its potential transgenerational effects It summarizes key findings and highlights the importance of ncRNA mediated regulation in responding to environmental constraints emphasizing the unarguable biological function of ncRNAs and their role as critical regulators in adaptation and survival Rice Biotechnology Gurdev S.
