language development in very young children is to investigate their vocabulary development and for bilingual children this means measuring their abilities in both languages This book takes an important step in this direction it documents the expressive vocabularies of children aged 16 45 months who were exposed to different language pairs and bilingual contexts and investigates the risk and protective effects of various environmental factors In each of the six studies the vocabularies of typically developing children were measured using the vocabulary checklist of the MacArthur Bates Communicative Development Inventories and its adaptations to other languages Developmental and language background questionnaires provided additional information on children s developmental history risk factors for language impairment language exposure as well as parental education and occupation This harmonised methodology was designed within COST Action IS0804 Language Impairment in a Multilingual Society Linguistic Patterns and the Road to Assessment The outcomes of this cross linguistic research contribute towards answering theoretical questions regarding early bilingual vocabulary acquisition They also have clinical relevance potentially assisting speech language pathologists and those interested in early language development in distinguishing between clinically significant bilingual delays and the natural consequences of bilingual exposure This book was originally published as a special issue of the International Journal of Bilingual Education and Bilingualism
