Mokuolu,John Kuumuori Ganle ,Tina Marye Slusher,Hippolite Onyejiaka Amadi,2024-09-20

Newborn babies are arguably the most vulnerable class of patients in any society. They are entirely incapable of surviving on their own without external help from carers and society. A poorly attended newborn will more likely die than one who received well guided and knowledgeable care. Therefore the neonatal mortality rate of any society represents a quick measure of the efficiency of its healthcare system, available technologies and knowledge base. It is common knowledge that low and middle income countries (LMICs) contribute over 80% of the global annual burden of neonatal deaths. Limited access to sustainable technologies for neonatal care is one of the major impediments to lowering neonatal mortality in LMICs. Highly sophisticated technologies as applied in high income countries (HICs) may be unaffordable and unsustainable at LMICs; however a well crafted basic technology may be appreciably effective in lifesaving, affordable and easily maintainable by the indigenous people. The promotion, adaptation, implementation and scale up of such appropriate technologies by other LMICs could offer them the quickest route to better neonatal survival. *Department of Defense Catalog of Logistics Models*, 1990
