Module 4: Dewlap Colors

1. *Anolis cristatellus* and *A. cooki* are both trunk-ground anoles that live on Puerto Rico. *A. cristatellus* lives in a shady, forest environment, while *A. cooki* lives in an open, sunny environment. What is an adaptive explanation for why the dewlap of one species evolved to be brighter and that of another species darker?
2. From the bar graph generated in the virtual lab (see below), how do the dewlap colors of the two species compare?

3. How would you determine whether the difference between the two populations is statistically significant?
4. If a species of anoles with dark dewlaps colonized a heavily forested island, predict what would happen over time to the color of the dewlap. Using your knowledge of natural selection and genetics, explain your prediction.
