SCH. Recall that SCH is the statement that for all cardinals κ,

$$\kappa^{\mathrm{cf}(\kappa)} = 2^{\mathrm{cf}(\kappa)} + \kappa^+;$$

it follows from work of Woodin and Gitik (see Jech [8, Chapter 36] and references therein) that the failure of SCH is equiconsistent with the existence of a cardinal κ of Mitchell order $o(\kappa) = \kappa^{++}$. Baumgartner showed that the proper forcing axiom PFA (see subsection 1.2) is consistent relative to the existence of supercompact cardinals, see Shelah [18, Chapter VII]: it is widely expected that, once fine structural inner model theory has been developed enough, it will be shown that PFA is in fact equiconsistent with a strong large cardinal axiom. The best available result to date is from Jensen-Schimmerling-Schindler-Steel [9], where it is shown that PFA implies the existence of non-domestic mice (see subsection 1.3), see also Andretta-Neeman-Steel [1].

1.2. Forcing axioms. As said before, forcing axioms are not yet so widely understood. While some set theorists go as far as considering them natural statements, what seems to be the consensus is that they formalize a very desirable feature of the universe of sets. Namely, one would like the universe to be as "wide" or "saturated" as possible. The way in which forcing axioms formalize this desire is by stating that certain sets that can be added by certain forcing posets already exist. There are restrictions on the class of posets to be considered and on how generic these sets that would have been added can actually be. By loosening or increasing the restrictions, a variety of forcing axioms can be identified. The most widely used and best known is by far Martin's axiom MA, see Martin-Solovay [14], but this is not a strong enough statement to even decide the size of the continuum. Strong forcing axioms are much stronger than MA both in consequences and in consistency strength. Typical examples are the proper forcing axiom PFA introduced by Baumgartner and Shelah, see Baumgartner [2] and Shelah [18, Chapter VII], and Martin's maximum MM introduced in the groundbreaking paper Foreman-Magidor-Shelah [5].

For Γ a collection of forcing notions, let FA(Γ) be the statement that for any $\mathbb{P} \in \Gamma$ and any ω_1-many given dense subsets of $\mathbb{P}$ there is (in V) a filter $G \subseteq \mathbb{P}$ sufficiently generic in the sense that G meets each of these dense filters.

Assume that X is an uncountable set. A set $S \subseteq [X]^\omega$ is said to be *stationary* if for any function $f : [X]^{<\omega} \to X$ there is a set $y \in S$ closed under f. A forcing $\mathbb{P}$ is *proper* iff for any stationary set S, it is still the case in $V^{\mathbb{P}}$ that S is stationary. In particular, uncountable sets in V are still uncountable in $V^{\mathbb{P}}$ and thus $\omega_1^V = \omega_1^{V^{\mathbb{P}}}$. The proper forcing axiom PFA is the statement FA(Proper), where Proper is the class of proper posets.

Given a poset $\mathbb{P}$, it can be shown, see Foreman-Magidor-Shelah [5], that FA($\{\mathbb{P}\}$) fails if there is a stationary subset S of ω_1 that is no longer stationary in $V^{\mathbb{P}}$ (one says that the stationarity of S was not preserved). Martin's maximum MM is the statement that FA(Γ) holds, where Γ is the class of posets

latest research on truth features the work of recognized luminaries in the field put together following a rigorous refereeing process Along with an introduction outlining the central issues in the field it provides a unique and unrivaled view of contemporary work on the nature of truth with papers selected from key conferences in 2011 such as Truth Be Told Amsterdam Truth at Work Paris Paradoxes of Truth and Denotation Barcelona and Axiomatic Theories of Truth Oxford Studying the nature of the concept of truth has always been a core role of philosophy but recent years have been a boom time in the topic With a wealth of recent conferences examining the subject from various angles this collection of essays recognizes the pressing need for a volume that brings scholars up to date on the arguments Offering academics and graduate students alike a much needed repository of today s cutting edge work in this vital topic of philosophy the volume is required reading for anyone needing to keep abreast of developments and is certain to act as a catalyst for further innovation and research **Gödel's Disjunction** Leon Horsten,Philip Welch,2016-09-08 The logician Kurt G del in 1951 established a disjunctive thesis about the scope and limits of mathematical knowledge either the mathematical mind is not equivalent to a Turing machine i e a computer or there are absolutely undecidable mathematical problems In the second half of the twentieth century attempts have been made to arrive at a stronger conclusion In particular arguments have been produced by the philosopher J R Lucas and by the physicist and mathematician Roger Penrose that intend to show that the mathematical mind is more powerful than any computer These arguments and counterarguments to them have not convinced the logical and philosophical community The reason for this is an insufficiency if rigour in the debate The contributions in this volume move the debate forward by formulating rigorous frameworks and formally spelling out and evaluating arguments that bear on G del s disjunction in these frameworks The contributions in this volume have been written by world leading experts in the field *Truth and Falsehood* Yaroslav Shramko,Heinrich Wansing,2011-09-15 The book presents a thoroughly elaborated logical theory of generalized truth values understood as subsets of some established set of basic truth values After elucidating the importance of the very notion of a truth value in logic and philosophy we examine some possible ways of generalizing this notion The useful four valued logic of first degree entailment by Nuel Belnap and the notion of a bilattice a lattice of truth values with two ordering relations constitute the basis for further generalizations By doing so we elaborate the idea of a multilattice and most notably a trilattice of truth values a specific algebraic structure with information ordering and two distinct logical orderings one for truth and another for falsity Each logical order not only induces its own logical vocabulary but determines also its own entailment relation We consider both semantic and syntactic ways of formalizing these relations and construct various logical calculi **Philosophy of Information** ,2008-11-10 Information is a recognized fundamental notion across the sciences and humanities which is crucial to understanding physical computation communication and human cognition The Philosophy of Information brings together the most important perspectives on information It includes major technical approaches while also setting out the historical backgrounds of information as well as
