Framework for Structural Design outlines one of the most promising new developments in architecture engineering and
construction AEC Building information modeling BIM is an information management and analysis technology that is changing
the role of computation in the architectural and engineering industries The innovative process constructs a database
assembling all of the objects needed to build a specific structure Instead of using a computer to produce a series of drawings
that together describe the building BIM creates a single illustration representing the building as a whole This book highlights
the BIM technology and explains how it is redefining the structural analysis and design of building structures BIM as a
Framework Enabler This book introduces a new framework the structure and architecture synergy framework SAS
framework that helps develop and enhance the understanding of the fundamental principles of architectural analysis using
BIM tools Based upon three main components the structural melody structural poetry and structural analysis along with the
BIM tools as the frame enabler this new framework allows users to explore structural design as an art while also factoring in
the principles of engineering The framework stresses the influence structure can play in form generation and in defining
spatial order and composition By highlighting the interplay between architecture and structure the book emphasizes the
conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the
art and science of whole structural system concepts Presents the use of BIM technology as part of a design process or
framework that can lead to a more comprehensive intelligent and integrated building design Places special emphasis on the
application of BIM technology for exploring the intimate relationship between structural engineering and architectural
design Includes a discussion of current and emerging trends in structural engineering practice and the role of the structural
engineer in building design using new BIM technologies Building Information Modeling Framework for Structural Design
provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way
building structures are designed and constructed Advances and Challenges in Structural Engineering Hugo
