

The following pages are intended to help in dealing with common roadside emergencies and breakdowns. You will find more detailed fault finding information at the back of the manual, and repair information in the main chapters.

If your car won't start and the starter motor doesn't turn

- ☐ If it's a model with automatic transmission, make sure the selector is in P or N.
- ☐ Open the bonnet and make sure that the battery terminals are clean and tight.
- ☐ Switch on the headlights and try to start the engine. If the headlights go very dim when you're trying to start, the battery is probably flat. Get out of trouble by jump starting (see next page) using a friend's car.

A A poor earth connection can cause intermittent faults in more than one circuit.

B Check the security and condition of the battery connections.

C Visually check engine harness connections/multipugs, including the alternator connectors.

Check that electrical connections are secure (with the ignition switched off) and spray them with a water-dispersant spray like WD-40 if you suspect a problem due to damp.

D Check the main fuse links, fuse and relays in the engine compartment fusebox.

E If the automatic fuel cut-off switch has been triggered, reset it by pressing the rubber disc on top of the switch. Located inside the vehicle, to the left of the clutch pedal.

If your car won't start even though the starter motor turns as normal

- ☐ Is there fuel in the tank?
- ☐ Has the engine immobiliser been deactivated?
- ☐ Is there moisture on electrical components under the bonnet? Switch off the ignition, then wipe off any obvious dampness with a dry cloth. Spray a water-repellent aerosol product (WD-40 or equivalent) on ignition and fuel system electrical connectors like those shown in the photos. (Note that diesel engines don't usually suffer from damp).
