Agent-Oriented Software Engineering III Fausto Giunchiglia, James Odell, Gerhard Weiß, 2003-07-01 Over the

past three decades software engineers have derived a progressively better understanding of the characteristics of complexity in software. It is now widely recognised that interaction is probably the most important single characteristic of complex software. Software architectures that contain many dynamically interacting components each with their own thread of control and engaging in complex coordination protocols are typically orders of magnitude more complex to correctly and efficiently engineer than those that simply compute a function of some input through a single thread of control. Unfortunately it turns out that many if not most real world applications have precisely these characteristics. As a consequence a major research topic in computer science over at least the past two decades has been the development of tools and techniques to model, understand and implement systems in which interaction is the norm. Indeed many researchers now believe that in future computation itself will be understood as chiefly a process of interaction. Computerworld, 1995-05-22.
