

**Objectivity: An Introduction**

Students demonstrate an understanding of engineering problem-solving techniques simply from the knowledge already provided by learning the principles of thermodynamics. The key to understanding the introduction of design is to present the primary responsibility associated with design. The typical engineering culture does not require every student who goes to the university that provides training in the technical education to develop design as a requirement for success. Students are trained to solve given design, and it is not until a few years later, during the transition to the workplace, when significant changes in the engineering curriculum occur and students are given the chance to learn to understand the value of design as a requirement for success. In this activity, students are given the chance to learn design as a requirement for success.

The activity is designed to demonstrate the design process, which is a complex solution to a problem. The design process is a complex of the following design process:

1. Design process (definition):
