

Economics 101
Spring 2005
The Final Review Sheet (Prof. Kelly)

Note: This is a list of important and key points for topics after the second midterm. This list should be used together with the previous two review lists as the final will be cumulative. As before, these review sheets should serve as a checklist for you to see whether you have studied everything you need to for the final. To do well in the final, you should focus on your lecture and section notes, as well as the practice questions. Good luck in your study!

MONOPOLY

1. Definition and fundamental sources of Monopoly.

---Barriers to entry (examples?):

- a. exclusive ownership of a key resource;
- b. exclusive right assigned by the government;
- c. economies of scale;
- d. threat of force or sabotage.

2. Natural Monopoly.

---arises where it's more efficient for a single firm to serve the society. (Examples? What will happen if we have more than one firm in the market?)

3. Profit Maximization Condition (for a single-price monopoly): $MR=MC$.

- a. The demand curve facing a monopoly is the same as the industry demand curve;
- b. MC and ATC are similar to those for perfectly competitive firms;
- c. MR is less than the price: $MR < P$ (why?);

IMPORTANT:

 if demand is linear, $P=a-bQ$ (a, b are positive constants), then marginal revenue is:

$$MR = a-2bQ.$$

 (Math: $TR=P*Q=aQ-bQ^2$, $MR=dTR/dQ=a-2bQ$.)

- d. The Monopoly can earn an economic profit even in the LR (there is no entry!).

4. Inefficiency of Monopoly.

- a. Compared to an identical perfectly competitive industry, output is less and price is higher with a monopoly;
- b. Less output and higher price will result in a loss in Consumer Surplus (CS) relative to the CS found under perfect competition and an increase in Producer Surplus (PS) relative to the PS found under perfect competition---and there will be a Dead-Weight Loss with the monopoly (Be careful: does PS have anything to do with the ATC curve?);

Microeconomics Final Review Sheet
