The Long Hedge Jason West,2017-09-08 Part of the Greenleaf Publishing Responsible Investment Series Mitigating and adapting to risks and changing circumstances is a natural part of doing business But methods of mitigating and adapting can be quite different in terms of time cost and observed impacts The impacts of mitigation activities are more immediate while the benefits of adaptation activities may take many years to take effect Nowhere is this difference more apparent than in the case of the corporate response to climate change In the context of climate change adaptation is the process of changing behaviour in response to actual or expected climate change impacts Climate change adaptation is now emerging as a critical partner to mitigation and indeed may even become the primary protection mechanism for future generations In this unique book Jason West provides a comprehensive assessment of the management of climate change adaptation in the corporate sector The book provides a formal overview of the range of approaches available along with a series of practical case studies and examples that can be used by companies and other organizations to identify assess and manage climate change adaptation A major focus is on the financial and investment implications of climate change adaptation West examines how firms can evaluate the investment decisions associated with long term climate change adaptation measures including how such investments can be valued and funded the appropriate accounting treatment of such measures and appropriate risk management and governance practices in relation to such measures The book also considers the needs and interests of investors and other stakeholders and considers how they can

assess the adequacy and appropriateness of corporate action on climate change The Long Hedge will be essential reading and a key text for risk practitioners investors financiers scholars and policy makers in the field of climate change The Environment-Conflict Nexus Francis Galgano,2018-07-15 The aim of this book is to demonstrate how environmental factors have caused an evolution in the landscape of national security since the end of the Cold War Through relevant case studies the scope of the problem on the national security landscape due to environmental stressors is illuminated examined and synthesized with climate related data Human variables such as governance GDP and vulnerability are taken into account and are compared against environmental factors to more accurately determine the causative agents of regional conflicts which threaten national security These case studies comprise the majority of the text and they show how individual conflicts are uniquely influenced by environmental stress with variations from situation to situation This book will be of interest to government and military professionals and may serve as a resource for college courses in the areas of military geography international affairs and sustainability studies **Climate Change and Policy** Gabriele Gramelsberger,Johann Feichter,2011-03-30 The debate on how mankind should respond to climate change is diverse as the appropriate strategy depends on global as well as local circumstances As scientists are denied the possibility of conducting experiments with the real climate only climate models can give insights into man induced climate change by experimenting with digital climates under varying conditions and by extrapolating past and future states into the future But the nature of models is a purely representational one A model is good if it is believed to represent the relevant processes of a natural system well However a model and its results in particular in the case of climate models which interconnect countless hypotheses is only to some extent testable although an advanced infrastructure of evaluation strategies has been developed involving strategies of model intercomparison ensemble prognoses uncertainty metrics on the system and component levels The complexity of climate models goes hand in hand with uncertainties but uncertainty is in conflict with socio political expectations However certain predictions belong to the realm of desires and ideals rather than to applied science Today s attempt to define and classify uncertainty in terms of likelihood and confidence reflect this awareness of uncertainty as an integral part of human knowledge in particular on knowledge about possible future developments The contributions in this book give a first hand insight into scientific strategies in dealing with uncertainty by using simulation models and into social political and economical requirements in future projections on climate change Do these strategies and requirements meet each other or fail The debate on how mankind should respond to climate change is diverse as the appropriate strategy depends on global as well as local circumstances As scientists are denied the possibility of conducting experiments with the real climate only climate models can give insights into man induced climate change by experimenting with digital climates under varying conditions and by extrapolating past and future states into the future But the nature of models is a purely representational one A model is good if it is believed to represent the relevant processes of a natural system well However a model and its

Climate Change Kaufui Vincent Wong,2015-12-23 Climate Change is a collection of a number of papers as well as chapters about the science of the subject This collection is meant to inflame and excite conversation among engineers and scientists with society at large It would serve as a catalyst for a three credit course as a relatively new engineering subject to both engineering and non engineering university students As university education develops to better prepare future leaders to appreciate science technology engineering and mathematics engineering courses for a mix of engineering and non engineering majors are essential and so is the requirement of worthy textbooks This monograph intends to be one of the useful tools available for this timely topic The wide range of topics includes climate change and theories the second law of thermodynamics the global greenhouse effect anthropogenic heat release evidence around us owing to environmental change sea level rise jungles and forests heat islands atmospheric carbon dioxide removal via technology nanotechnology and other innovations in response to climate change the energy water food nexus

The Anthropocene Project Byron Williston,2015 The evidence presented in the recently released Fifth Assessment Report AR5 of the Intergovernmental Panel on Climate Change IPCC suggests strongly that continued failure to make meaningful cuts to greenhouse gas emissions could bring about disastrous results for the human community especially for future generations Summing up the findings of AR5 Rajendra Pachauri chairman of the IPCC has stated that our persistent inaction on climate change presents a grave threat to the very social stability of human systems The Anthropocene Project attempts to make philosophical sense of this examining the reasons for the inaction highlighted by the IPCC and suggests the normative bases for overcoming it Williston identifies that we are now in the human age the Anthropocene but he argues that this is no mere geological marker It is instead best viewed as the latest permutation of an already existing moral and political project rooted in Enlightenment values The author shows that it can be fruitful to do climate ethics with this focus because in so many aspects of our culture we already endorse broadly Enlightenment values about progress equality and the value of knowledge

But these values must be robustly instantiated in the dispositions of moral agents and so we require a climate ethics emphasizing the virtues of justice truthfulness and rational hope One of the book s most original claims is that our moral failure on this issue is in large part the product of motivated irrationality on the part of the world s most prosperous people We have failed to live up to our commitments to justice and truthfulness because we are respectively morally weak and self deceived Understanding this provides the basis for the rational hope that we might yet find a way to avoid climate catastrophe

Climate Change and Water Resources Sangam Shrestha,Mukand S. Babel,Vishnu Prasad Pandey,2014-05-22 Covering the various aspects of water and climate change Climate Change and Water Resources presents the principles of climate change science and its effects on earth s water supply Utilizing the knowledge and expertise from well known experts in the field the text provides a broad outline of the many interrelated aspects of climate variations climate change and connections to water resources Designed to help managers with developing strategies implementing policies and investing in infrastructure and information sources for integrated water resources management the text addresses many issues regarding climate change and water resources It also includes adaptation options which are essential to water resource sustainability The material is divided into four sections The first part of the book provides an introduction to climate change and considers theoretical aspects and available tools The second part of the book examines the impacts that climate change has on the water sector The third part focuses on the different adaptation measures needed to minimize the effects of climate change The fourth part presents a number of case studies Focused on climate change in the water sector Climate Change and Water Resources closely analyzes scientific research and fuels study for a greater understanding of climate change and the proper management of water This text is useful for undergraduate and postgraduate students scientists and design engineers as well as those working at research institutes and implementing and planning agencies

Corporate Power and Human Rights Manette Kaisershot,Nicholas Connolly,2018-02-02 There is ample evidence about the negative effects business activity of all types can have on the provision of human rights Equally there can be little doubt economic development usually driven through business activity and trade is necessary for any state to provide the institutions and infrastructure necessary to secure and provide human rights for their citizens The United Nations and businesses recognise this tension and are collaborating to effect change in business behaviours through voluntary initiatives such as the Global Compact and John Ruggie s Guiding Principles Yet voluntary approaches are evidently failing to prevent human rights violations and there are few alternatives in law for affected communities to seek justice This book seeks to robustly challenge the current status quo of business approaches to human rights in order to develop meaningful alternatives in an attempt to brench the gap between the realities of business and human rights and its discourse This book was previously published as a special issue of the International Journal of Human Rights

Race Rights Reparations Fernne Brennan,2017-07-14 This book considers institutional racism as a problem that exists within modern societies Its roots lie with the transatlantic slave trade and

slavery and the solution involves ridding society of the problem. It is argued here that first there needs to be an acceptance of its existence then developing the tools needed to deal with it and finally to implement those tools so that institutional racism can be permanently removed from society. The book has four themes: the first considers the nature of institutional racism; the second theme looks at instances of institutional racism through matters such as deaths in custody and skin lightening; the third considers the concept of reparations; and the final area looks at the development of social movements as a way of pushing institutional racism up the political agenda. The development of a social movement is part of a social discourse which would for example push mentoring as a form of reparations. There is a need for more research on the manifestations of institutional racism and this book is part of that discourse. It is argued that the legacy of the slave trade and slavery is continuing and contemporary through the presence of institutional racism in society. This problem has not been addressed through legislation and policies devised to combat racial discrimination. Institutional racism needs to be understood as being located in the processes and procedures of societal institutions.
