Schlag,2012-12-02 The resurgence of time of flight mass spectrometry TOF MS has had its origin in the simplicity of construction and application of such instruments together with the high transmission and the great increase in resolution that has been achieved The instrument lends itself naturally to a coupling with pulsed laser sources though this is not a prerequisite It also affords a time resolution far beyond that traditionally achieved with mass spectrometric rapid scan techniques a recent example being the real time analysis of a multi component mixture from an automobile exhaust Furthermore the mass range appears to be extremely large mass up to 500 kDa and beyond what is being readily measured in the laboratory today The present set of contributions attempts to give a survey of current applications from many of the active groups in the field A variety of new applications are considered which are no doubt just the beginning of large new areas of application By presenting this work in book form it is hoped that it will be of help to the many groups intending to initiate work in this rapidly expanding new area of mass spectrometry **A General Theory of Evidence and Proof** Kevin

M. Clermont,2024-10-02 This book reframes the fundamentals of decisionmaking under uncertainty For almost a century theorists have spoken of truth finding in terms of probability They have said things like some past fact was 51% certain or proclaimed that in a civil dispute a fact must be shown to exceed a 50% likelihood But such talk is a misleading misconception The reason is that traditional probability fails to distinguish epistemic uncertainty from aleatory uncertainty This conflation leads to mistakes such as invoking probability s product rules which calculate a conjunction s likelihood as being low From there the theorists have argued that in a myriad of ways the law violates the probability calculus unforgivably Today other theorists are newly realizing that in large part the law does not deal in probability They now can defend the way that law has found facts since long before the invention of probability and on to the present They are also reevaluating such intuitive practices as those that humans use in daily life to combine inferences upon inferences A hotly contested literature has emerged In a significant comprehensive and original contribution this book develops a theoretical justification for the intuitive approaches that humans deploy across a broad range of decisionmaking Instead of probability the book focuses on degrees of belief that estimate given the state of the evidence how far a proposition has been fully proven Instead of combining findings by the rules of probability the book uses the rules of multivalent logic The aim is to illuminate decisionmaking outside statistical analysis showing that our ancient wisdom is in fact theoretically solid The target is everyone interested in improving decisionmaking
