Risk Assessment of *Listeria Monocytogenes* in Ready-to-eat Foods, 2004. Cases of listeriosis appear to be predominantly associated with ready to eat products. FAO and WHO have undertaken a risk assessment of *Listeria monocytogenes* in ready to eat foods prepared and reviewed by an international team of scientists. Input was received from several international fora including expert consultations and Codex Alimentarius committee meetings as well as via public and peer review. This technical report provides complete documentation of the risk assessment, the approaches taken, the data and methodology used and the results. It also contains four example assessments addressing the risk of listeriosis associated with fresh milk, ice cream, fermented meats and cold smoked fish. These products were selected to represent typical classes of ready to eat products.

Enterobacter Sakazakii and Other Microorganisms in Powdered Infant Formula World Health Organization, 2004. Consistent with the need to provide safe feeding for all infants, FAO and WHO jointly convened an expert meeting on *Enterobacter sakazakii* and other microorganisms in powdered infant formula, Geneva 2 to 5 February 2004. The workshop was organized in response to a specific request to FAO/WHO for scientific advice from the Codex Committee on Food Hygiene to provide input for the revision of the Recommended International Code of Hygienic Practice for Foods for Infants and Children. After reviewing the available scientific information, the expert meeting concluded that intrinsic contamination of powdered infant formula with *Enterobacter sakazakii* and *Salmonella* has been a cause of infection and illness in infants, including severe disease which can lead to serious developmental sequelae and death. This report, co-published with WHO, looks at a range of control strategies during both manufacture and subsequent use of powdered infant formula that may be implemented to minimize the risk.

Exposure Assessment of Microbiological Hazards in Food World Health Organization, 2008 The guidelines aim to provide a practical framework and approach for undertaking exposure assessment of microbiological hazards bacteria fungi viruses protozoa and microbial toxins in foods in the context of a risk assessment or as a stand alone process *A Primer on Risk Assessment Modelling* Aamir M. Fazil, Food and Agriculture Organization of the United Nations, 2005-01-01 This paper is written as an introduction to the concepts of microbial risk assessment in general but with a seafood focus and greater emphasis on the quantitative approach The risk of food borne disease is a combination of the likelihood of exposure to the pathogen the likelihood of infection or intoxication resulting in illness and the severity of the illness In a system as complex as the production and consumption of food many factors affect both the likelihood and severity To manage food safety effectively a systematic means of examining these factors is necessary **Shelf Life** Dominic Man, 2015-03-20 Shelf life a term recognised in EU UK food legislation may be defined as the period of time for which a food product will remain safe and fit for use provided that it is kept in defined storage conditions During this period the product should retain its desired sensory chemical physical functional and microbiological characteristics as well as accurately comply with any nutritional information printed on the label Shelf life therefore refers to a number of different aspects each food product has a microbiological shelf life a chemical shelf life and a sensory or organoleptic shelf life These categories reflect the different ways in which a food product will deteriorate over time Ultimately the shelf life of a food product is intended to reflect the overall effect of these different aspects Shelf life has always been an important facet of industrial food preparation and production as food and drink

are often produced in one area and then distributed to other areas for retailing and consumption. Globalised distribution and supply chains make it imperative that food should survive the transit between producer and consumer as a perishable commodity. Food carries a high risk of spoilage. As such, a realistic workable and reproducible shelf life has to be determined every time a new food product is developed and marketed. Shelf life determination of food has become an integral part of food safety, quality assurance, product development, marketing and consumer behaviour.

Dominic Mans Shelf Life now in a revised and updated second edition encompasses the core considerations about shelf life. Section 1 introduces shelf life, describes its relationship to food safety and provides answers to the frequently asked questions around shelf life determination and testing which are a manager's chief concerns. Section 2 covers the science of the various ways in which food deteriorates and spoils, including the physical, chemical and microbiological changes. Section 3 looks at shelf life in practice using case studies of different products to illustrate how shelf life may be determined in real life settings. This book will be invaluable to both practitioners and students in need of a succinct and comprehensive overview of shelf life concerns and topics.

The Stability and Shelf Life of Food Persis Subramaniam, Peter Wareing, 2016-05-24

The second edition of *The Stability and Shelf life of Food* is a fully revised and thoroughly updated edition of this highly successful book. This new edition covers methods for shelf life and stability evaluation, reviewing the modelling and testing of the deterioration of products as well as the use of sensory evaluation methods for testing food spoilage. The first part of the book focuses on deteriorative processes and factors influencing shelf life, covering aspects such as chemical deterioration, physical instability and microbiological spoilage. The effects of process and packaging on the stability and shelf life of products are also covered in this part. Part Two reviews the methods for shelf life and stability evaluation. These include sensory evaluation methods and instrumental methods to determine food quality deterioration. The final section of the book covers stability of important ingredient categories from oils and fats to beverages such as beer, wine, coffee and fruit juices, in addition to bakery products and meats. With updated chapters reflecting advances made in the field and with the addition of new chapters covering the stability and shelf life of a variety of products, this new edition will provide the latest research for both academics working in the field of food quality as well as providing essential information for food scientists working in industry.
