Classification and Information Processing at the Turn of the Millennium Reinhold Decker,Wolfgang A. Gaul,2012-12-06 This volume contains revised versions of selected papers presented during the 23rd Annual Conference of the German Classification Society GfKl Gesellschaft für Klassifikation The conference took place at the University of Bielefeld Germany in March 1999 under the title Classification and Information Processing at the Turn of the Millennium Researchers and practitioners interested in data analysis classification and information processing in the broad sense including computer science multimedia WWW knowledge discovery and data mining as well as special application areas such as in alphabetical order biology finance genome analysis marketing medicine public health and text analysis had the opportunity to discuss recent developments and to establish cross disciplinary cooperation in their fields of interest Additionally software and book presentations as well as several tutorial courses were organized The scientific program of the conference included 18 plenary or semi plenary lectures and more than 100 presentations in special sections The peer reviewed papers are presented in 5 chapters as follows Data Analysis and Classification Computer Science Computational Statistics and Data Mining Management Science Marketing and Finance Biology Genome Analysis and Medicine Text Analysis and Information Retrieval As an unambiguous assignment of results to single chapters is sometimes difficult papers are grouped in a way that the editors found appropriate Machine Learning in Computer Vision Nicu Sebe,Ira Cohen,Ashutosh Garg,Thomas S. Huang,2005-10-04 The goal of this book is to address the use of several important machine learning techniques into computer vision applications An innovative combination of computer vision and machine learning techniques has the promise

of advancing the field of computer vision which contributes to better understanding of complex real world applications The effective usage of machine learning technology in real world computer vision problems requires understanding the domain of application abstraction of a learning problem from a given computer vision task and the selection of appropriate representations for the learnable input and learned internal entities of the system In this book we address all these important aspects from a new perspective that the key element in the current computer revolution is the use of machine learning to capture the variations in visual appearance rather than having the designer of the model accomplish this As a bonus models learned from large datasets are likely to be more robust and more realistic than the brittle all design models **Reliable**

Feature Selection for Knowledge Discovery and Data Mining Huan Liu,Hiroshi Motoda,2012-12-06 As computer power grows and data collection technologies advance a plethora of data is generated in almost every field where computers are used The computer generated data should be analyzed by computers without the aid of computing technologies it is certain that huge amounts of data collected will not ever be examined let alone be used to our advantages Even with today s advanced computer technologies e g machine learning and data mining systems discovering knowledge from data can still be fiendishly hard due to the characteristics of the computer generated data Taking its simplest form raw data are represented in feature values The size of a dataset can be measured in two dimensions number of features N and number of instances P Both N and P can be enormously large This enormity may cause serious problems to many data mining systems Feature selection is one of the long existing methods that deal with these problems Its objective is to select a minimal subset of features according to some reasonable criteria so that the original task can be achieved equally well if not better By choosing a minimal subset of features irrelevant and redundant features are removed according to the criterion When N is reduced the data space shrinks and in a sense the data set is now a better representative of the whole data population If necessary the reduction of N can also give rise to the reduction of P by eliminating duplicates **Towards Functional Safety in Drive-by-Wire Vehicles** Peter Johannes Bergmiller,2015-05-09 This book presents approaches to address key challenges based on a vehicle level view and with a special emphasis on Drive

by Wire systems The design and testing of modern vehicle electronics are becoming more and more demanding due to increasing interdependencies among components and the safety criticality of tasks The development towards Drive by Wire functionalities in vehicles with multiple actuators for vehicle control further increases the challenge The book explicitly takes into account the interactions between components and aims at bridging the gap between the need to generate additional customer benefits and the effort to achieve functional safety The book follows a twofold approach on the one side it presents a toolchain to support efficient further development of novel functionalities for Drive by Wire vehicles The toolchain comprises appropriate software tools and scaled and full scale experimental vehicles On the other side development towards functionally safe and flexible Drive by Wire vehicles is addressed by proposing a top down designed architecture for vehicle electronics that is enabled by suitable mechanisms The resulting goal achievement with regard to functional safety is evaluated based on a novel hierarchical approach
