These 2017 findings are striking given that the U.S. economy, particularly exports and service industries, is projected through a long-term growth period. The U.S. economy is expected to grow at 2.5% through 2020, with some projections that extending this trend will be even more positive, giving the power sector a bright future. In the commercial sector, rapid new supply is being brought on-line, including from existing power generators. The DOE's new findings are a challenge, particularly under conditions of rapid population growth and rising energy demand, and will challenge the power sector.
