Mixed Methods Applications in Action Research Nataliya V. Ivankova,2015 This text outlines and explains in detail the necessary steps in

designing conducting implementing and reporting an action research study with a solid mixed methods foundation

Marvelous Minilessons for Teaching Nonfiction Writing K-3 Lori Jamison Rog, 2015-12-11 Today's young learners know more about their world than ever before. This remarkable book shows that even our youngest writers can consider audience and purpose as they use nonfiction writing to document their ideas and share those ideas with others. But if students are going to be able to use writing to learn, they must have opportunities for learning to write. That's what this book is for. A wealth of hands-on minilessons offer strategies for writing informational, persuasive, and procedural text. Each lesson starts with a learning goal and follows an I do, we do, you do format. Teachers will find a wealth of ideas for guiding young students to write about what they know and care about.

Action Research S. Michael Putman, Tracy Rock, 2016-12-29 Action Research Using Strategic Inquiry to Improve Teaching and Learning is a core text for the Action Research course in Education. The proposed text seeks to address the needs of practitioners as it will be primarily written for use within a graduate-level action research class. It will be oriented towards proactive planning as part of an organized, efficient process for developing and conducting an action research study. The book will be organized around implementation of the action research process using self-regulatory principles, which is characterized by four phases: task definition, goal setting, and planning, enacting, and adapting. These four phases will be addressed as the learner considers what action research encompasses and a topic to be studied, then proceeds to establish a plan and enact it. This overall process is organized as can be seen in the Table of Contents. Michael Putnam and Tracy Rock will highlight methods and processes that incorporate formative data that is readily available to teachers, facilitating associations between classroom instruction and the action research process. The text will also reinforce how action research can improve the teaching and learning process by reinforcing or changing perceptions about the use of informal data, including anecdotal notes or observations in the research process.

Fostering Children's Mathematical Power Arthur Baroody, Arthur J. Baroody, Jesse L.M. Wilkins, Ronald T. Coslick, 1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world. To meet the challenges of the 21st century, students will especially need mathematical power: a positive disposition toward mathematics, curiosity, and self-confidence; facility with the processes of mathematical inquiry, problem solving, reasoning, and communicating; and well-connected mathematical knowledge, an understanding of mathematical concepts, procedures, and formulas. This guide seeks to help teachers achieve the capability to foster children's mathematical power, the ability to excite them about mathematics, help them see that it makes sense, and enable them to harness its might for solving everyday and extraordinary problems. The investigative approach attempts to foster mathematical power by making the mathematics instruction process based, understandable, or relevant to the everyday life of students. Past efforts to reform mathematics instruction have focused on only one or two of these aims, whereas the investigative approach accomplishes all three. By teaching content in a purposeful context, an inquiry

based fashion and a meaningful manner this approach promotes children's mathematical learning in an interesting thought provoking and comprehensible way This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom It not only dispenses information but also serves as a catalyst for exploring conjecturing about discussing and contemplating the teaching and learning of mathematics Figuring Out Fluency in Mathematics Teaching and Learning, Grades K-8 Jennifer M.

Bay-Williams, John J. SanGiovanni, 2021-03-02 Because fluency practice is not a worksheet Fluency in mathematics is more than adeptly using basic facts or implementing algorithms Real fluency involves reasoning and creativity and it varies by the situation at hand Figuring Out Fluency in Mathematics Teaching and Learning offers educators the inspiration to develop a deeper understanding of procedural fluency along with a plethora of pragmatic tools for shifting classrooms toward a fluency approach In a friendly and accessible style this hands on guide empowers educators to support students in acquiring the repertoire of reasoning strategies necessary to becoming versatile and nimble mathematical thinkers It includes Seven Significant Strategies to teach to students as they work toward procedural fluency Activities fluency routines and games that encourage learning the efficiency flexibility and accuracy essential to real fluency Reflection questions connections to mathematical standards and techniques for assessing all components of fluency Suggestions for engaging families in understanding and supporting fluency Fluency is more than a toolbox of strategies to choose from it's also a matter of equity and access for all learners Give your students the knowledge and power to become confident mathematical thinkers
