

MATHEMATICAL LITERACY – GRADE 12 NOTES

CHAPTER 6

6.1 Interpreting and analysing data

Purposes of graphs:

- a way of exploring the relationships in data
- a way of displaying and reporting data
- making it easier to report patterns and relationships, shapes of distributions and trends.

Any graph used to report findings should show:

- the significant features and findings of the investigation in a fair and easy-to-read way
- the underlying structure of an investigation in terms of the relationships between and within the variables
- the dependent variable on the horizontal (x) axis and the independent variable on the vertical (y) axis.

Types of graphs

We have the following types of graphs:

- Line graph
- Bar graph
- Histogram
- Scatter plot
- Pie chart
- Box and whisker plot

6.1.1 Line graphs

In data handling we use line graphs to show the relationship between two quantities. A line graph is formed by using straight lines to join data points which have been mapped on a grid. It is used to show the change of information over time.

Worked example 10

The table below shows the average number of minutes per month that Jabu spent watching TV from January to November last year.

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov
Daily TV viewing time (min)	108	103	108	120	115	122	116	105	110	105	104

- Plot this data on a set of axes.
- Can you observe any trends or patterns in the data? Give some possible reasons for these trends.
- Would you be able to represent this data on a bar graph?
- What is the advantage of using a line graph to show this information?

Grade 12 Mathematical Literacy 2013 Study Guide:

Teaching and Learning Secondary School Mathematics Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step **The Connection Between Mathematical and Reading Abilities and Disabilities** Shelley Shaul, Joanna Christodoulou, Maria T. Sikkema-de Jong, 2022-05-03 [Literacy Strategies for English Learners in Core Content Secondary Classrooms](#) Margarita Espino Calderon, Maria N. Trejo, 2015-10-08 Motivate English learners to boost proficiency with confidence This book focuses on instructional strategies that integrate language literacy and content across all subject areas in secondary education Presenting instructional methods within the framework of the Common Core and other state standards the authors demonstrate how rigorous instruction can help amplify students self worth and promote more significant learning to ensure all students thrive [Making Sense of Number, K-10](#) Mary Fiore, Ryan Tackaberry, 2018-11-27 This practical book shows you how to get to know the needs and abilities of your students and help them make sense of math concepts Designed to enhance your professional learning the book shows you how to notice interpret confirm and respond to student thinking You will discover how to structure learning experiences around key number concepts quantity counting relating and representing developed across various strands patterning and algebra numbers and operations measurement geometry and data and probability Powerful examples of questions and prompts guide you to create a classroom where students get the support they need as they develop confidence in their number sense **Researching Developing Countries** Forrest Daniel Wright, 2015-11-19 Why are some countries rich while others are poor Why are some well governed while others experience frequent conflict And how do you measure a country s true success anyways Social scientists have attempted to answer these types of questions for decades and have increasingly turned to data for this task Researching Developing Countries A Data Resource Guide for Social Scientists serves as a reference guide for social scientists and students interested in answering these complex questions The book will also be helpful to librarians serving the social science disciplines Topics covered in the book include human development economics governance conflict demographics migration and refugees environment foreign aid energy and infrastructure innovation and entrepreneurship geography and urban development and public opinion Covers

over 30 countries with emerging markets Explores a wide array of topics for each country and their investment opportunities Includes a focus on international audiences as the book expands beyond the US market

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05

Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics

Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math

Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development

Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts

Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing

Alternatively it will be good to test whether math interventions will improve reading **Thinking and Acting Systemically** Alan Daly, Kara Finnigan, 2016-05-19 This volume argues that districts are important as a lever for change given the limited success of school by school efforts Policies that focus on skill development recognize and support performance create opportunities for collaboration build leader capacity and create networks of knowledge sharing hold great potential for improving districts but it will require a paradigm shift in the way we view our public school system and those who work within it away from blame and toward complex systems change **Effective Math Interventions** Robin S. Coddling, Robert J. Volpe, Brian C. Poncy, 2017-02-09 Building foundational whole number knowledge can help put K 5 students on the path to academic success and career readiness Filling a gap for school practitioners this book presents step by step guidelines for designing and implementing classwide small group and individual interventions for mathematics difficulties Effective procedures for screening assessment intervention selection and progress monitoring are described and illustrated with detailed case vignettes User friendly features include 20 reproducible handouts and forms the print book has a large size format with lay flat binding for easy photocopying Purchasers get access to a Web page where they can download and print the reproducible materials This book is in The Guilford Practical Intervention in the Schools Series edited by T Chris Riley Tillman **Making Learning Job-Embedded** Sally J. Zepeda, 2018-05-03 Making Learning Job Embedded Cases from the Field of Instructional Leadership is a book for sitting principals aspiring principals and teacher leaders This edited volume includes studies that describe and detail findings from dissertation research conducted by scholar practitioners in preK 12 schools These studies examined job embedded professional learning how teachers learned from their work how they grew in their understandings of their work with students and how they could learn from their interactions with others Each chapter examines very specific aspects of professional learning that school leaders need to have understanding about to be able to create systems that support teachers in the work they do to teach students interact with colleagues participate in team meetings and other aspects that constitute the work of being a teacher Conclusions and recommendations are offered for school leaders to support an environment and culture that embraces job embedded learning as an integral part of the school's foundation for building capacity The messages across the chapters point to the primacy of teacher engagement and the value of job embedded learning *Instructional Practices with and without Empirical Validity* Bryan G. Cook, Melody Tankersley, Timothy J. Landrum, 2016-07-06 It is important for Stakeholders to be aware of both practices supported as effective as well as ineffective for students with learning and behavioral disabilities in order to provide instruction that results in improved learner outcomes in critical areas of education
