**Education** Ellen Hazelkorn, 2016-11-18 Global rankings and the Geopolitics of Higher Education is an examination of the impact and influence that university rankings have had on higher education policy and public opinion in recent years. Bringing together some of the most informed authorities on this very complex issue, this edited collection of specially commissioned chapters examines the changes affecting higher education and the implications for society and the economy. Split into four interrelated sections, this book covers: The development of rankings in higher education; how they have impacted upon both the production of knowledge and its geography; and their influence in shaping policymaking. Overviews of the significance of rankings for higher education systems in Europe, Asia, Africa, Russia, South America, India, and North America. An analysis of rankings in relation to key concerns that pervade contemporary higher education. Examination of the role rankings are likely to play in the future directions for higher education. This is a significant scholarly work that analyses in depth an important development in higher education systems and which is likely to have an important influence upon how we understand the higher education policy making process past, present, and future. It provides new analysis and conceptual understanding for researchers and firm evidence for policy makers to use when addressing the value of rankings in measuring the quality of their institutions. Besides bringing together a powerful cast of academics, this book incorporates contributions from heads of important international higher education organisations from both those involved in making and also in administering key decisions. This timely, reflective, and accessible book forms crucial reading for those studying the subject of rankings as well as the broader implications and unintended consequences of rankings on national higher education policies. Extending beyond academic researchers and students, this book will also be of significant interest to policymakers, higher education leaders, and key stakeholders.

**Innovation in China** William H.A. Johnson, 2015-07-22 The word innovation is often used today regarding China as if the concept were new to the Eastern country. Most people know, however, that China was a juggernaut in creating new technologies and at one time was the innovation king of the world, but

that was at least seven centuries ago Today the great oriental power is attempting once again to take the throne of innovation for its own This desire to usurp the throne which had been diligently taken by the West during the Scientific Revolution has placed an almost unrealistic emphasis on innovation In Innovation in China The Tail of the Dragon the author explores the issues and actors involved in making innovation the emphasis in China He uses a simple systems model of innovation and various perceptual lenses The lenses are aimed at the historical economic political legal educational and cultural elements of an innovation based society After reading the book the reader will understand more about how innovation is happening in China and by whom More importantly the reader will begin a journey of learning more about where the country is going as it relentlessly continues its drive to create an innovation based society and to become once again in terms appropriate to its history the Emperor of Innovation
