Characterization and Applications provides a targeted approach to hybrid nanostructures enabling the development of these advanced nanomaterials for specific applications. The book begins by reviewing the status of hybrid nanostructures, their current applications and future opportunities. This is followed by chapters examining synthesis and characterization techniques as well as interactions within nanohybrid systems. The second part of the book provides detailed chapters each highlighting a particular application area and discussing the preparation of various hybrid nano systems that can potentially be utilized in that area. The last chapters turn towards notable state of the art hybrid nanomaterials and their properties and applications. This book is a valuable resource for researchers and advanced students across polymer science, nanotechnology, rubber technology, chemistry, sustainable materials and materials engineering as well as scientists, engineers and R D professionals with an interest in hybrid nanostructures or advanced nanomaterials for a industrial application. Provides synthesis methods, characterization techniques and structure property analysis for hybrid nanostructures. Offers in depth coverage that focuses on specific applications across energy storage, environment, automotive, aerospace, construction and biomedicine. Includes the latest novel areas such as elastomeric hybrid nano systems, hybrid ceramic polymer nanocomposites and self assembled structures.
